

Heparin Drip Calculation Reference (sample calculations for reference only!)

Heparin Infusion Rate: $\frac{\text{Total Units (in IV bag)}}{\text{Total Volume (ml)}} = \frac{\text{Units/hour}}{X \text{ (ml/hour)}}$

Your patient has a DVT is ordered for a heparin infusion to start at 18 units/kg/hour per the practitioner's order. His weight is 75kg. The heparin infusion comes in a 500ml bag with 25,000 units. Calculate the starting rate of the infusion (ml/hour).

Step 1: Calculate the starting units per hour.

$$18 \text{ units} \times 75 \text{ kg} = 1350 \text{ units/hour}$$

Step 2: Calculate the starting rate of the infusion (solve for X).

Heparin Infusion Rate: $\frac{25,000 \text{ units}}{500\text{ml}} = \frac{1350 \text{ units/hour}}{X \text{ (ml/hour)}}$

$$25,000 \text{ units (X ml/hr)} = 675,000$$

$$X \text{ ml/hr} = \frac{675,000}{25,000}$$

$$X = 27 \text{ ml/hour}$$

Your patient's PTT result is 55. Per the Intravenous High Intensity Heparin Nomogram (for DVT/PE), the infusion dose should be increased by 2 units/kg/hour. Your patient is currently receiving an infusion based on 18/units/kg/hour. What is the new rate for the infusion (note: use the same initial weight to calculate the new rate).

Step 1: Calculate the new units per hour.

$$18 \text{ units/kg/hour} + 2 \text{ units/kg/hour} = 20 \text{ units/kg/hour}$$

$$20\text{units} \times 75 \text{ kg} = 1500 \text{ units/hour}$$

Step 2: Calculate the new rate of the infusion (solve for X).

Heparin Infusion Rate: $\frac{25,000 \text{ units}}{500\text{ml}} = \frac{1500 \text{ units/hour}}{X \text{ (ml/hour)}}$

$$25,000 \text{ units (X ml/hr)} = 750,000$$

$$X \text{ ml/hr} = \frac{750,000}{25,000}$$

$$X = 30 \text{ ml/hour}$$

Criner, Rodger E. Barnette, Gilbert E. D'Alonzo, 2010-06-27 Critical care medicine is a dynamic and exciting arena where complex pathophysiologic states require extensive knowledge and up to date clinical information An extensive knowledge of basic pathophysiology as well as awareness of the appropriate diagnostic tests and treatments that are used to optimize care in the critically ill is essential Since our first edition 7 years ago new

information crucial to the care and understanding of the critically ill patient has rapidly accumulated. Because this knowledge base crosses many different disciplines, a comprehensive multidisciplinary approach presenting the information is essential, similar to the multidisciplinary approach that is used to care for the critically ill patient. We have strived to provide this content in an easily digestible format that uses a variety of teaching tools to facilitate understanding of the presented concepts and to enhance information retention. To meet the demand to provide comprehensive and diverse education in order to understand the pathogenesis and optimum care of a variety of critical illnesses, we have substantially revised the prior topics in the first edition with updated information. We have also markedly expanded the number of topics covered to include acute lung injury and the acute respiratory distress syndrome, an expanded discussion of the physiology and operation of mechanical ventilation, obstetrical care in the ICU, neurosurgical emergencies, acute coronary syndromes, cardiac arrhythmias, role of whole body rehabilitation in the ICU, ethical conduct of human research in the ICU, and nursing care of the ICU patient.

Pediatric Critical Care Study Guide Steven E. Lucking, Frank A. Maffei, Robert F. Tamburro, Neal J.

Thomas, 2012-04-12 This is the first comprehensive study guide covering all aspects of pediatric critical care medicine. It fills a void that exists in learning resources currently available to pediatric critical care practitioners. The major textbooks are excellent references but do not allow concise reading on specific topics and are not intended to act as both text and study guide. There are also several handbooks available but these are usually written for general pediatric residents and lack the advanced physiology and pathophysiology required for the higher level pediatric critical care practitioner.
