biologists and researchers who wish to expand their knowledge in dynamics of plant herbivore relationships *Insect-Plant Interactions and Induced Plant Defence* Derek J. Chadwick, Jamie A. Goode, 2008-05-23 Insect Plant Interactions and Induced Plant Defence Chair John A Pickett 1999 This book examines the sophisticated mechanisms that plants use to defend themselves against attack by insects and pathogens focusing on the networks of plant signalling pathways that underlie these defences In response to herbivory plants release a complex blend of as many as 100 volatile chemicals known as semiochemicals sign chemicals These act as an airborne SOS signal revealing the presence of the herbivore to the predators and parasitoids that are its natural enemies Plants also have endogenous defence mechanisms that can be induced in response to pathogens and separate chapters deal with systemic acquired resistance phytoalexins and the interacting pathways in pathogen and pest resistance The book discusses underlying biochemical mechanisms by which plant stress leads to the biosynthesis of chemical signals from pools of secondary metabolite precursors or even from the primary metabolism source Finally consideration is given to the possibilities for exploiting these signalling pathways by plant molecular genetics The use of plant signals and their analogues to switch on defence pathways in crop plants is covered in depth Bringing together contributions from entomologists chemical ecologists molecular biologists and plant physiologists this book is truly interdisciplinary and will be essential reading for anyone with an interest in agricultural pest control

Insect-Plant Biology Louis M. Schoonhoven, Joop J. A. van Loon, Marcel Dicke, 2005-12-01 Half of all insect species are dependent on living plant tissues consuming about 10% of plant annual production in natural habitats and an even greater percentage in agricultural systems despite sophisticated control measures Plants possess defences that are effective against almost all herbivorous insect species Host plant specialization observed in over 80% of these animals appears to be an effective adaptation to breach these defence systems The mechanisms underlying plant defence to invading herbivores on the one side and insect adaptations to utilize plants for nutrition defence and shelter on the other are the main subjects of this book In the case of plants exposed to insect herbivores they include the activation of defence systems in order

to minimize damage as well as the emission of chemical signals that may attract natural enemies of the invading herbivores and may be exploited by neighbouring plants that mount defences as well. For insects they include complex behavioural adaptations and their underlying sensory systems with their implications for learning and nutritional plasticity as well as the endocrinological aspects of life cycle synchronization with host plant phenology. *Insect Plant Biology* discusses the operation of these mechanisms at the molecular and organismal levels and explicitly puts these in the context of both ecological interactions and evolutionary processes. In doing so it uncovers the highly intricate antagonistic as well as mutualistic interactions that have evolved between plants and insects. The book concludes with a chapter on the application of our knowledge of insect plant interactions to agricultural production. This multidisciplinary approach will appeal to students in biology, agricultural entomology, ecology and indeed anyone interested in the principles underlying the relationships between the two largest groups of organisms on earth, plants and insects.

Plant Resistance to Herbivores and Pathogens

Robert S. Fritz, Ellen L. Simms, 2012-07-15. Far from being passive elements in the landscape, plants have developed many sophisticated chemical and mechanical means of deterring organisms that seek to prey on them. This volume draws together research from ecology, evolution, agronomy and plant pathology to produce an ecological genetics perspective on plant resistance in both natural and agricultural systems. By emphasizing the ecological and evolutionary basis of resistance, the book makes an important contribution to the study of how phytophages and plants coevolve. *Plant Resistance to Herbivores and Pathogens* not only reviews the literature pertaining to plant resistance from a number of traditionally separate fields but also examines significant questions that will drive future research. Among the topics explored are selection for resistance in plants and for virulence in phytophages, methods for studying natural variation in plant resistance, the factors that maintain intraspecific variation in resistance and the ecological consequences of within-population genetic variation for herbivorous insects and fungal pathogens. A comprehensive review of the theory and information on a large, rapidly growing and important subject. Douglas J. Futuyma, State University of New York, Stony Brook.

Marine Chemical Ecology

James B. McClintock, Bill J. Baker, 2001-06-13. The interdisciplinary field of marine chemical ecology is an expanding and dynamic science. J. Freed, Gerald A. Silverstone, Vicky Rippere, 2022-05-24 Originally published in 1985 and authored by an epidemiologist a medical immunologist a chemist and a clinical psychologist this book shows that unravelling the links between diet and disease is a very complex task and while the evidence is strong in many cases in others it is of doubtful validity Many of the diseases prevalent in developed countries are discussed here cancer arterial heart disease food allergies and intolerances as well as the impact of diet on mental health
