Statistical Control by Monitoring and Adjustment George E. P. Box, Alberto Luceño, Maria del Carmen Paniagua-Quinones, 2011-09-09 Praise for the First Edition This book is a significant addition to the literature on statistical practice. It should be of considerable interest to those interested in these topics. International Journal of Forecasting Recent research has shown that monitoring techniques alone

are inadequate for modern Statistical Process Control SPC and there exists a need for these techniques to be augmented by methods that indicate when occasional process adjustment is necessary. Statistical Control by Monitoring and Adjustment Second Edition presents the relationship among these concepts and elementary ideas from Engineering Process Control EPC demonstrating how the powerful synergistic association between SPC and EPC can solve numerous problems that are frequently encountered in process monitoring and adjustment. The book begins with a discussion of SPC as it was originally conceived by Dr Walter A Shewhart and Dr W Edwards Deming. Subsequent chapters outline the basics of the new integration of SPC and EPC which is not available in other related books. Thorough coverage of time series analysis for forecasting process dynamics and non stationary models is also provided and these sections have been carefully written so as to require only an elementary understanding of mathematics. Extensive graphical explanations and computational tables accompany the numerous examples that are provided throughout each chapter and a helpful selection of problems and solutions further facilitates understanding. Statistical Control by Monitoring and Adjustment Second Edition is an excellent book for courses on applied statistics and industrial engineering at the upper undergraduate and graduate levels. It also serves as a valuable reference for statisticians and quality control practitioners working in industry.

Clinical Trial Design
Guosheng Yin, 2013-06-07

A balanced treatment of the theories, methodologies and design issues involved in clinical trials using statistical methods. There has been enormous interest and development in Bayesian adaptive designs especially for early phases of clinical trials. However, for phase III trials, frequentist methods still play a dominant role through controlling type I and type II errors in the hypothesis testing framework. From practical perspectives, Clinical Trial Design: Bayesian and Frequentist Adaptive Methods provides comprehensive coverage of both Bayesian and frequentist approaches to all phases of clinical trial design. Before underpinning various adaptive methods, the book establishes an overview of the fundamentals of clinical trials as well as a comparison of Bayesian and frequentist statistics. Recognizing that clinical trial design is one of the most important and useful skills in the pharmaceutical industry, this book provides detailed discussions on a variety of statistical designs, their properties and operating characteristics for phase I, II and III clinical trials as well as an introduction to phase IV trials. Many practical issues and challenges arising in clinical trials are addressed. Additional topics of coverage include Risk and benefit analysis for toxicity and efficacy trade offs, Bayesian predictive probability trial monitoring, Bayesian adaptive randomization, Late onset toxicity and response, Dose finding in drug combination trials, Targeted therapy designs. The author utilizes cutting edge clinical trial designs and statistical methods that have been employed at the world's leading medical centers as well as in the pharmaceutical industry. The software used throughout the book is freely available on the book's related website, equipping readers with the necessary tools for designing clinical trials. Clinical Trial Design is an excellent book for courses on the topic at the graduate level. The book also serves as a valuable reference for statisticians and biostatisticians in the pharmaceutical industry as well as for researchers and practitioners who design, conduct and monitor
