Heat Shock Proteins and the Brain: Implications for Neurodegenerative Diseases and Neuroprotection

Alexzander A.A. Asea, Ian R. Brown, 2008-04-06 With the prevalence of neurodegenerative diseases on the rise as average life expectancy increases the hunt for effective treatments and preventive measures for these disorders is a pressing challenge. Neurodegenerative disorders such as Alzheimer's disease, Huntington's disease, Parkinson's disease, and amyotrophic lateral sclerosis have been termed protein misfolding disorders that are characterized by the neural accumulation of protein aggregates. Manipulation of the cellular stress response involving the induction of heat shock proteins offers a therapeutic strategy to counter conformational changes in neural proteins that trigger pathogenic cascades resulting in neurodegenerative diseases. Heat shock proteins are protein repair agents that provide a line of defense against misfolded aggregate-prone proteins.

Heat Shock Proteins and the Brain: Implications for Neurodegenerative Diseases and Neuroprotection reviews current progress on neural heat shock proteins (HSP) in relation to neurodegenerative diseases. Part I: neuroprotection; Part II: extracellular HSP; Part III: aging and control of life span; Part IV: Key basic and clinical research laboratories from major universities and hospitals around the world contribute chapters that review present research activity and importantly project the field into the future. The book is a must read for researchers, postdoctoral fellows, and graduate students in the fields of Neuroscience, Neurodegenerative Diseases, Molecular Medicine, Aging, Physiology, Pharmacology, and Pathology.

Heat Shock Protein-Based Therapies Alexzander A.A. Asea, Naif N. Almasoud, Sunil Krishnan, Punit Kaur, 2015-07-22 The book *Heat Shock Protein Based Therapies* provides the most up to date review on new heat shock protein based mechanisms used in the therapy and treatment of various human disorders and diseases including cancer, muscular atrophy, neurodegenerative disorders, Alzheimer's Disease, Multiple Sclerosis, and infectious diseases, HIV, periodontal disease. Written by leaders in the field of heat shock protein research, the chapters systematically and in a step wise fashion take the reader through the fascinating sequence of events by which mechanisms dependent on heat shock proteins are targeted. The chapters also provide answers as to HSP biological significance to the host. This book is a must read for graduate and postgraduates in the field of Drug Development, Biotechnology, Pharmaceutical Industry, Phytomedicine, Biology, plant and mammal, Biochemistry, pro and eukaryotic, Oncology, Immunology, Microbiology, Exercise Medicine, Physiology, Inflammatory diseases, Autoimmunity, Pharmacology, and Pathology.

Heat Shock Proteins and Whole Body Adaptation to Extreme Environments Michael B. Evgen'ev, David G. Garbuz, Olga G. Zatsepina, 2014-10-24 For many years the authors have investigated the adaptive role of heat shock proteins (HSPs) in different animals including the representatives of homothermic and poikilothermic organisms that inhabit regions with contrasting thermal conditions. This book will summarize the data accumulated in the course of these studies and describe the general molecular mechanisms underlying the adaptation of various organisms to aggressive environments. We also concentrate on different evolutionary trends.

characteristic for HSP systems in the course of adaptation to fluctuating environmental conditions In addition we describe the peculiarities in the regulatory regions of heat shock genes necessary for fine tuning of these systems providing the adaptation to adverse conditions Special emphasis is given to the role of mobile elements in the evolution and functioning of various groups of HSP genes The book combines the results of field studies and laboratory analysis of stress genes systems
