adults who take them get worse or are worse people than non drug users For example young moderate drug users enjoy a better psychological well being than non drug users who tend to be more introverted anxious hostile inexpressive or are not strictly empathic Furthermore some surveys conducted with university students have shown that many drug users indicate that they have experienced positive effects on their long term drug use If the drug use control level of frequent consumers is higher than assumed it is easy to deduce that improving the control among those people who take drugs is possible who perhaps see how this capacity lowers The Manual of Controlled Drug Use addresses those people who consume drugs and wish to reduce their consumption gain better control or cut the risks associated with drug use and drug abuse It also addresses anyone who wishes to make full use of the positive effects that drugs can offer them regardless of them being drug users or not If a psychological procedure existed with which it was possible to experience positive effects of drugs and which cut or eliminated their negative effects it would be most useful for those people who take drugs and who do not wish to stop taking them In fact this procedure actually exists and it is called the Self Regulation Therapy This Manual includes a detailed description of the Self Regulation Therapy Finally this Manual also addresses therapists and researchers who wish to work with exercises and intervention programs on moderate drug use Engineering Field Manual for Conservation Practices United States.
