The Oxford Handbook of Adolescent Substance Abuse Robert A. Zucker, Sandra A. Brown, 2019-08-01 Adolescent substance abuse is the nation's 1 public health problem It originates out of a developmental era where experimentation with the world is increasingly taking place and where major changes in physical self and social relationships are taking place These changes cannot be understood by any one discipline nor can they be described by focusing only on the behavioral and social problems of this age period the characteristics of normal development or the pharmacology and addictive potential of specific drugs They require knowledge of the brain's systems of reward and control genetics psychopharmacology personality child development psychopathology family dynamics peer group relationships culture social policy and more Drawing on the expertise of the leading researchers in this field this Handbook provides the most comprehensive summarization of current knowledge about adolescent substance abuse The Handbook is organized into eight sections covering the literature on the developmental context of this life period the epidemiology of adolescent use and abuse similarities and differences in use addictive potential and

consequences of use for different drugs etiology and course as characterized at different levels of mechanistic analysis ranging from the genetic and neural to the behavioural and social Two sections cover the clinical ramifications of abuse and prevention and intervention strategies to most effectively deal with these problems The Handbook's last section addresses the role of social policy in framing the problem in addressing it and explores its potential role in alleviating it Handbook of Life-Course Criminology Chris L. Gibson, Marvin D. Krohn, 2012-11-06 The wide ranging scope of the Handbook of Life Course Criminology covers genetics and environment child offenders and late bloomers the impact of school and peers lifelong and time limited criminal careers and qualitative and quantitative methodologies This unique Handbook is further set apart by its dual coverage of the leading edge of current research and innovative directions for future work in the field Pathways to crime have been a central concept of criminology from its inception Accordingly a lifespan approach to the field has replaced earlier biological and sociological perspectives with a more nuanced understanding of offender behavior and a wider lens of study The contributions to this Handbook break down issues of criminal and antisocial behavior from early childhood to late adulthood examining developmentally targeted prevention and intervention strategies and reviewing emerging trends in research Among the topics Childhood including physical aggression in childhood pre and perinatal development and environment Adolescence the impact of schooling unstructured time with peers gang membership and peer networks Adulthood Adult onset crime unemployment in emerging adulthood crime and adult outcomes Prevention and Intervention community programs lifetime intervention strategies re entry This volume will be a valuable piece for researchers in Criminology and Criminal Justice as well as related disciplines such as Sociology Developmental Psychology and Social Policy It will serve as an important reference for the current state of research as well as a roadmap for future scholars This impressive Handbook provides comprehensive coverage of key developmental and life course issues in criminology from birth to adulthood including biology genetics gangs schools neighborhoods adult onset desistance and interventions The research recommendations in each chapter are especially important and they should stimulate advances in knowledge for many years to come This Handbook should be required reading for all criminologists David P Farrington Professor of Psychological Criminology Cambridge University Cambridge UK In just a few decades developmental criminology has become the dominant intellectual force in criminology This volume demonstrates why It provides incisive reviews of important themes in developmental criminology More importantly it lays out rich agendas for future research that should inspire the next generation of developmental criminologists Daniel S Nagin Teresa and H John Heinz III University Professor of Public Policy and Statistics Carnegie Mellon University Pittsburgh PA USA Reducing Adolescent Risk Daniel Romer, 2003-04 Current policies treat adolescent risk behaviours as separate problems requiring separate solutions ignoring the overlap of many risk behaviours This text seeks to move beyond the fractured approach of preventing one kind of behaviour at a time and suggests more comprehensive prevention strategies *Reforming Juvenile Justice* National

Research Council, Division of Behavioral and Social Sciences and Education, Committee on Law and Justice, Committee on Assessing Juvenile Justice Reform, 2013-06-22 Adolescence is a distinct yet transient period of development between childhood and adulthood characterized by increased experimentation and risk taking a tendency to discount long term consequences and heightened sensitivity to peers and other social influences A key function of adolescence is developing an integrated sense of self including individualization separation from parents and personal identity Experimentation and novelty seeking behavior such as alcohol and drug use unsafe sex and reckless driving are thought to serve a number of adaptive functions despite their risks Research indicates that for most youth the period of risky experimentation does not extend beyond adolescence ceasing as identity becomes settled with maturity Much adolescent involvement in criminal activity is part of the normal developmental process of identity formation and most adolescents will mature out of these tendencies Evidence of significant changes in brain structure and function during adolescence strongly suggests that these cognitive tendencies characteristic of adolescents are associated with biological immaturity of the brain and with an imbalance among developing brain systems This imbalance model implies dual systems one involved in cognitive and behavioral control and one involved in socio emotional processes Accordingly adolescents lack mature capacity for self regulations because the brain system that influences pleasure seeking and emotional reactivity develops more rapidly than the brain system that supports self control This knowledge of adolescent development has underscored important differences between adults and adolescents with direct bearing on the design and operation of the justice system raising doubts about the core assumptions driving the criminalization of juvenile justice policy in the late decades of the 20th century It was in this context that the Office of Juvenile Justice and Delinquency Prevention OJJDP asked the National Research Council to convene a committee to conduct a study of juvenile justice reform The goal of Reforming Juvenile Justice A Developmental Approach was to review recent advances in behavioral and neuroscience research and draw out the implications of this knowledge for juvenile justice reform to assess the new generation of reform activities occurring in the United States and to assess the performance of OJJDP in carrying out its statutory mission as well as its potential role in supporting scientifically based reform efforts

Unmarried Couples with Children Paula England, Kathryn Edin, 2007-10-17 Today a third of American children are born outside of marriage up from one child in twenty in the 1950s and rates are even higher among low income Americans Many herald this trend as one of the most troubling of our time But the decline in marriage does not necessarily signal the demise of the two parent family over 80 percent of unmarried couples are still romantically involved when their child is born and nearly half are living together Most claim they plan to marry eventually Yet half have broken up by their child's third birthday What keeps some couples together and what tears others apart After a breakup how do fathers so often disappear from their children's lives An intimate portrait of the challenges of partnering and parenting in these families Unmarried Couples with Children presents a variety of unique findings Most of the pregnancies were not explicitly planned

but some couples feel having a child is the natural course of a serious relationship Many of the parents are living with their child plus the mother's child from a previous relationship When the father also has children from a previous relationship his visits to see them at their mother's house often cause his current partner to be jealous Breakups are more often driven by sexual infidelity or conflict than economic problems After couples break up many fathers complain they are shut out especially when the mother has a new partner For their part mothers claim to limit dad's access to their children because of their involvement with crime drugs or other dangers For couples living together with their child several years after the birth marriage remains an aspiration but something couples are resolutely unwilling to enter without the financial stability they see as a sine qua non of marriage They also hold marriage to a high relational standard and not enough emotional attention from their partners is women's number one complaint Unmarried Couples with Children is a landmark study of the family lives of nearly fifty American children born outside of a marital union at the dawn of the twenty first century Based on personal narratives gathered from both mothers and fathers over the first four years of their children's lives and told partly in the couples own words the story begins before the child is conceived takes the reader through the tumultuous months of pregnancy to the moment of birth and on through the child's fourth birthday It captures in rich detail the complex relationship dynamics and powerful social forces that derail the plans of so many unmarried parents The volume injects some much needed reality into the national discussion about family values and reveals that the issues are more complex than our political discourse suggests
