Homage To Gaia The Life Of An Independent Scientist:

Homage to Gaia James Lovelock, 2001 With over fifty patents to his name and a stream of awards including one from the Queen of England James Lovelock is a distinguished scientist who has been widely recognized by the international scientific community In this inspiring autobiography Lovelock tells the story of his life as an independent scientist from his first job as a lab assistant to his energetic crusade to save the ozone layer We see how Lovelock came to develop his inventions and theories he recounts the history behind his famous Gaia theory and talks us through his many inventions We learn about the electron capture detector which was extremely important in the development of environmental awareness revealing for the first time the ubiquitous distribution of pesticide residues in the environment and the global distribution of CFCs He talks about his work with NASA where his ideas were adopted in the program for planetary exploration And he tells about the work he has done for organizations like the Ministry of Defence The Marine Biological Association and companies such as Shell and Hewlett Packard Written in a sharp and energetic style James Lovelock's book will entertain and inspire anyone interested in science or the creative spirit

Homage to Gaia James Lovelock, 2014 In *Homage to Gaia* James Lovelock tells the story of his life as an independent scientist and how he came to develop his inventions and theories He has worked with NASA the Ministry of Defence and The Marine Biological Association

Homage To Gaia James Lovelock, 2000-02-01 James Lovelock is a scientist who chose to do space research from his home who worked there with dangerous chemicals He has been doing this for the past 35 years has produced world class science His work has led to the founding of the Green Movement the way we think about the Earth His invention of the Electron Capture Detector the most sensitive chemical detector of its time told us pesticides other harmful chemicals were everywhere that we were polluting on a global scale His discovery that CFCs were accumulating in the Earth's atmosphere led to the realization that the ozone layer was in danger Most important was his quest for Gaia a revolutionary idea that has changed forever the way we see the Earth

The Life of an Independent Scientist James Lovelock, 2014 In *Homage to Gaia* James Lovelock tells the story of his life as an independent scientist and how he came to develop his inventions and theories He has worked with NASA the Ministry of Defence and The Marine Biological Association

How to Cool the Planet Jeff Goodell, 2010-04-15 Thoughtful informative and darkly entertaining It's the best treatment of this important and scary topic you can find Elizabeth Kolbert Right now a group of scientists is working on ways to minimize the catastrophic impact of global warming But they're not designing hybrids or fuel cells or wind turbines They're trying to lower the temperature of the entire planet And they're doing it with huge contraptions that suck CO₂ from the air machines that brighten clouds and deflect sunlight away from the earth even artificial volcanoes that spray heat reflecting particles into the atmosphere This is the radical and controversial world of geoengineering which only five years ago was considered to be fringe But as Jeff Goodell points out the economic crisis combined with global political realities is making these ideas look sane even inspired Goodell himself started out as a skeptic

concerned about tinkering with the planet's thermostat We can't even predict next week's weather so how are we going to change the temperature of whole regions What if a wealthy entrepreneur shoots particles into the stratosphere on his own Who gets blamed if something goes terribly wrong And perhaps most disturbing what about wars waged with climate control as the primary weapon There are certainly risks but Goodell believes the alternatives could be worse In the end he persuades us that geoengineering may just be our last best hope a Plan B for the environment His compelling tale of scientific hubris and technical daring is sure to jump start the next big debate about the future of life on earth Goodell explores with infectious curiosity and thoughtful narration this strange promising and untested suite of climate fixes BusinessWeek A quick enjoyable read through a complex timely topic And after you read it you'll never look at the sky or the ocean or Earth really in quite the same way again The Christian Science Monitor *Here on Earth* Tim Flannery, 2011-04-05 From the internationally acclaimed scientist explorer and conservationist comes an awe inspiring account of earth's evolution Beginning at the moment of creation with the Big Bang *Here on Earth* explores the evolution of Earth from a galactic cloud of dust and gas to a planet with a metallic core and early signs of life within a billion years of being created In a compelling narrative Flannery describes the formation of the Earth's crust and atmosphere as well as the transformation of the planet's oceans from toxic brews of metals such as iron copper and lead to life sustaining bodies covering seventy percent of the planet's surface Life Flannery shows first appeared in these oceans in the form of microscopic plants and bacteria and these metals served as catalysts for the earliest biological processes known to exist From this starting point Flannery tells the fascinating story of the evolution of our own species exploring several early human species from the diminutive creatures the famed hobbits who lived in Africa around two million years ago to *Homo erectus* before turning his attention to *Homo sapiens* Drawing on Charles Darwin's and Alfred Russel Wallace's theories of evolution and Lovelock's Gaia hypothesis *Here on Earth* is a dazzling account of life on our planet You'll discover why Tim Flannery's books have made him the rock star of modern science Jared Diamond Pulitzer Prize winning author of *Guns Germs and Steel* *Nature-Based Expressive Arts Therapy* Sally Atkins, Melia Snyder, 2017-10-19 This book integrates the fields of expressive arts and ecotherapy to present a nature based approach to expressive arts work It highlights attitudes and practices in expressive arts that are particularly relevant to working with nature including cultivating an aesthetic response to the earth and the relationship between beauty and sustainability *The Wild and the Toxic* Jennifer Thomson, 2019-03-27 Health figures centrally in late twentieth century environmental activism There are many competing claims about the health of ecosystems the health of the planet and the health of humans yet there is little agreement among the likes of D.C. lobbyists grassroots organizers eco anarchist collectives and science based advocacy organizations about whose health matters most or what health even means In this book Jennifer Thomson untangles the complex web of political social and intellectual developments that gave rise to the multiplicity of claims and concerns about environmental health Thomson traces four strands of activism from the 1970s to

the present the environmental lobby environmental justice groups radical environmentalism and bioregionalism and climate justice activism By focusing on health environmentalists were empowered to intervene in the rise of neoliberalism the erosion of the regulatory state and the decimation of mass based progressive politics Yet as this book reveals an individualist definition of health ultimately won out over more communal understandings Considering this turn from collective solidarity toward individual health helps explain the near paralysis of collective action in the face of planetary disaster

An Ocean of Air Gabrielle Walker, 2021-05-12 The science and history of what lies between us and space I never knew air could be so interesting Bill Bryson New York Times bestselling author of *The Body* A Guide for Occupants A flamboyant Renaissance Italian discovers how heavy our air really is the air filling Carnegie Hall for example weighs seventy thousand pounds A one eyed barnstorming pilot finds a set of winds that constantly blow five miles above our heads An impoverished American farmer figures out why hurricanes move in a circle by carving equations with his pitchfork on a barn door A well meaning inventor nearly destroys the ozone layer he also came up with the idea of putting lead in gasoline A reclusive mathematical genius predicts thirty years before he's proven right that the sky contains a layer of floating metal fed by the glowing tails of shooting stars We don't just live in the air we live because of it It's the most miraculous substance on earth responsible for our food our weather our water and our ability to hear In this exuberant book science writer Gabrielle Walker peels back the layers of our atmosphere with the stories of the people who have uncovered its secrets A sense of wonder animates Ms Walker's high spirited narrative and speeds it along like a fresh blowing westerly The New York Times A fabulous introduction to the world above our heads Daily Mail on Sunday A lively history of scientists and adventurers exploration of this important and complex contributor to life on Earth readers will find this informative book to be a breath of fresh air Publishers Weekly

Darwin's Blind Spot Frank

Ryan,2002 In Ryan s view cooperation not competition lies at the heart of human society **Science and Sensibility** David Howe,2025-01-01 In an outer arm of the spiralling Milky Way galaxy can be seen an insignificant speck This is our home planet Earth Its skies clouds lands and seas and indeed life itself have long drawn the interest of scientists and artists alike Our cultural and scientific history is evidence enough that curiosity and wonder are the twin drivers of both scientific and artistic imaginations In Science and Sensibility David Howe unveils the stories of the scientists who helped to make sense of the stars clouds life rocks and the elements and weaves their tales with the thoughts and feelings of artists who found meaning as they experienced nature s beauty grandeur and mystery Scientific greats such as James Hutton Charles Darwin Dmitri Mendeleev Gregor Mendel and Annie Jump Cannon all the way up to today s leading scientists are complemented by the literary insights of people such as William Wordsworth Jorge Luis Borges and Iris Murdoch Readers are encouraged to embrace what the sciences and the arts can reveal together In doing so the earth below and the heavens above become brighter and richer The wonder and curiosity embodied in Science and Sensibility could perhaps take us a step closer to holding Infinity in the palm of your hand and Eternity in an hour Tagore and the Margins of the Nation under Colonialism Amartya Mukhopadhyay,2023-12-12 This book focuses on India s anti colonial politics which Rabindranath Tagore 1861 1941 brought into the mainstream of nationalist thinking It browses through the entire corpus of Tagore s writings in the genres of poetry fiction and essays to glean both used and hitherto unused un translated writings that illumine Tagore s gender consciousness and proto feminist thought and empathy presenting it in a wholly new light It teases out Tagore s original views on India s industrial capitalist development and his views on the roles of applied scientists and engineers in it to highlight his critique of the nature of science teaching in colonial India The volume also delineates Tagore s Upaniadic ecologism that creatively evoked anticolonialism and patriotism Lucid and topical the book will be indispensable for students and researchers in the fields of comparative literature history political science international relations and sociology at all levels and anybody interested in literary criticism and cultural studies **Wilhelm Reich, Biologist** James E. Strick,2015-04-01 Wilhelm Reich s experiments in the 1930s with cutting edge light microscopy and time lapse micro cinematography were considered discredited but not because of shoddy lab technique as has been claimed Scientific opposition to Reich s experiments James Strick argues grew out of resistance to his unorthodox sexual theories and Marxist leanings **Neocybernetics and Narrative** Bruce Clarke,2014-09-15 Neocybernetics and Narrative opens a new chapter in Bruce Clarke s project of rethinking narrative and media through systems theory Reconceiving interrelations among subjects media significations and the social this study demonstrates second order systems theory s potential to provide fresh insights into the familiar topics of media studies and narrative theory A pioneer of systems narratology Clarke offers readers a synthesis of the neocybernetic theories of cognition formulated by biologists Humberto Maturana and Francisco Varela incubated by cyberneticist Heinz von Foerster and cultivated in Niklas Luhmann s social systems theory From this foundation

he interrogates media theory and narrative theory through a critique of information theory in favor of autopoietic conceptions of cognition Clarke's purview includes examinations of novels Mrs Dalloway and Mind of My Mind movies Avatar Memento and Eternal Sunshine of the Spotless Mind and even Aramis Bruno Latour's idiosyncratic meditation on a failed plan for an automated subway Clarke declares the era of the cyborg to have ended laid to rest as the ontology of technical objects is brought into differential coordination with operations of living psychic and social systems The second order discourse of cognition destabilizes the usual sense of cognition as conscious awareness revealing the possibility of nonconscious and nonhuman forms of sentience

The Oxford Handbook of Religion and Science Philip Clayton, Zachary Simpson, 2006 The field of science and religion is exploding in popularity among both academics and the reading public This is a comprehensive and authoritative introduction to the debate written by the leading experts yet accessible to the general reader

Steering Human Evolution Yehezkel Dror, 2020-05-07 Humanity must steer its evolution As human knowledge moves a step ahead of Darwin's theories this book presents the emergence of human made meta evolution shaping our alternative futures This novel process poses fateful challenges to humanity which require regulation of emerging science and technology which may endanger the future of our species However to do so successfully a novel humanity craft has to be developed main ideologies and institutions need redesign national sovereignty has to be limited a decisive global regime becomes essential some revaluation of widely accepted norms becomes essential and a novel type of political leader based on merit in addition to public support is urgently needed Taking into account the strength of nationalism and vested interests it may well be that only catastrophes will teach humanity to metamorphose into a novel epoch without too high transition costs But initial steps such as United Nation reforms are urgent in order to contain calamities and may soon become feasible Being both interdisciplinary and based on personal experience of the author this book adds up to a novel paradigm on steering human evolution It will be of great interest to scholars and researchers of modern history evolution sciences future studies political science philosophy of action and science and technology It will also be of wide appeal to the general reader anxious about the future of life on Earth Comments on the Corona pandemic add to the book's concrete significance

Sustainable Wellbeing Futures Robert Costanza, Jon D. Erickson, Joshua Farley, Ida Kubiszewski, 2020-05-29 Ecological economics can help create the future that most people want a future that is prosperous just equitable and sustainable This forward thinking book lays out an alternative approach that places the sustainable wellbeing of humans and the rest of nature as the overarching goal Each of the book's chapters written by a diverse collection of scholars and practitioners outlines a research and action agenda for how this future can look and possible actions for its realisation

Mind and Emergence Philip Clayton, 2004-10-29 Strong claims have been made for emergence as a new paradigm for understanding science consciousness and religion Tracing the past history and current definitions of the concept Clayton assesses the case for emergent phenomena in the natural world and their significance for philosophy and theology Complex emergent phenomena

require irreducible levels of explanation in physics chemistry and biology This pattern of emergence suggests a new approach to the problem of consciousness which is neither reducible to brain states nor proof of a mental substance or soul Although emergence does not entail classical theism it is compatible with a variety of religious positions Clayton concludes with a defence of emergentist panentheism and a Christian constructive theology consistent with the new sciences of emergence
