What the Body Knows Merrill Baker-Medard,2024-10-22 A leading scientist's guide to the way our immune system protects us but only most of the time What is our immune system and how does it work A vast array of cells proteins and chemicals spring into action whenever our bodies are damaged but immunity is not something you can see touch or feel It can fight off malicious bacteria and viruses locate cancerous growths and even re wire our brains but sometimes our own tissues can get caught in its crossfire with catastrophic consequences Humans may be the most disease ridden animals on the planet Professor John Trowsdale shows how the immune system protects us and how our bodies invest huge resources to keep it running Immunity influences how we age and controls how we learn to fight off recurring diseases and how our bodies respond to chronic conditions such as heart disease and dementia But in the case of allergies and autoimmune conditions it can also easily get things wrong What the Body Knows is a hugely readable account of a fascinating phenomenon one which for good or for ill impacts every aspect of our lives

Cellular And Molecular Immunology Dr. Shalini Jiwan Chahande,2023-09-27 Immunology the study of the immune system is crucial to many areas of medicine biology The immune system has several purposes in protecting the body Autoimmune disorders allergic reactions and even cancer have been linked to immune system failure Immune responses are being linked to a wide range of metabolic cardiovascular and neurological diseases including Alzheimer's From Edward Jenner's work in the eighteenth century that led to the modern vaccination likely saving more lives than any other medical advance to many scientific breakthroughs in the nineteenth and twentieth centuries that led among other things to the identification of blood groups safe organ transplantation and the now ubiquitous use of monoclonal antibodies in science immunology has been crucial in advancing medical and scientific knowledge and practice Studies of immunotherapy autoimmune illnesses and immunizations for new infections like Ebola are advancing our knowledge of how to manage major health challenges The development of novel diagnostics and drugs for the treatment of a broad variety of illnesses has been made possible by our increased knowledge of fundamental immunology making it crucial for clinical and commercial applications Cutting edge research tools like flow cytometry and antibody technology are the result of the intersection of immunology and technological advancement
