Chapter 38: Angiosperm Reproduction and Biotechnology

Concept 38.1 *Flowers, double fertilization, and fruits are unique features of the angiosperm life cycle*

This may be a good time for you to go back to Chapter 29 and review alternation of generation and the terms associated with it. Figure 29.5 would be a good starting point. Then, review Concepts 30.1 and 30.3 on angiosperm life cycles. The angiosperm life cycle has three unique features, all of which start with the letter *F*, a good memory aid: *Flowers*, *Fruits*, and double *Fertilization*. You will want to remember these!

1. On this sketch of a flower, label all floral parts and give the function of each. Label also the *stamen* and *carpel*. Then, circle the flower parts that are essential for reproduction.

2. What is another name for the *microsporangia*?
3. Each *microspore mother cell* undergoes meiosis to form four haploid _____.
4. Each *microspore* undergoes mitosis to produce the male _____.
5. The male gametophyte is composed of only two cells. Name each cell, and tell what will come from each of them.
