Letters of William Gaddis William Gaddis, 2013-03-14 Now recognized as one of the giants of postwar American fiction, William Gaddis (1922-1998) shunned the spotlight during his life, which makes this collection of his letters a revelation. Beginning in 1930 when Gaddis was at boarding school and ending in September 1998 a few months before his death, these letters function as a kind of autobiography and are all the more valuable because Gaddis was not an autobiographical writer. Here we see him forging his first novel, *The Recognitions* (1955) while living in Mexico, fighting in a revolution in Costa Rica, and working in Spain, France, and North Africa. Over the next twenty years, he struggles

to find time to write the National Book Award winning *J R* 1975 amid the complications of work and family deals with divorce and disillusionment before reviving his career with *Carpenter s Gothic* 1985 then teaches himself enough about the law to indite *A Frolic of His Own* 1994 which earned him another NBA Returning to a topic he first wrote about in the 1940s he finishes his last novel *Agape Agape* as he lay dying

Reviews and book notices The Culture and Art of Death in 19th Century America D. Tulla Lightfoot, 2019-02-21

Nineteenth century Victorian era mourning rituals long and elaborate public funerals the wearing of lavishly somber mourning clothes and families posing for portraits with deceased loved ones are often depicted as bizarre or scary But behind many such customs were rational or spiritual meanings This book offers an in depth explanation at how death affected American society and the creative ways in which people responded to it The author discusses such topics as mediums as performance artists and postmortem painters and photographers and draws a connection between death and the emergence of three dimensional media

Victorian Science and Imagery Nancy Rose Marshall, 2021-07-27 The nineteenth century was a period of science and imagery when scientific theories and discoveries challenged longstanding boundaries between animal plant and human and when art and visual culture produced new notions about the place of the human in the natural world Just as scientists relied on graphic representation to conceptualize their ideas artists moved seamlessly between scientific debate and creative expression to support or contradict popular scientific theories such as Darwin s theory of evolution and sexual selection deliberately drawing on concepts in ways that allowed them to refute popular claims or disrupt conventional knowledges Focusing on the close kinship between the arts and sciences during the Victorian period the art historians contributing to this volume reveal the unique ways in which nineteenth century British and American visual culture participated in making science and in which science informed art at a crucial moment in the history of the development of the modern world Together they explore topics in geology meteorology medicine anatomy evolution and zoology as well as a range of media from photography to oil painting They remind us that science and art are not tightly compartmentalized separate influences Rather these are fields that share forms manifest as waves layers lines or geometries that invest in the idea of the evolution of form and that generate surprisingly kindred responses such as pain pleasure empathy and sympathy
