Beurton, Raphael Falk, Hans-Jörg Rheinberger, 2000-05-29 Advances in molecular biological research in the latter half of the twentieth century have made the story of the gene vastly complicated the more we learn about genes the less sure we are of what a gene really is Knowledge about the structure and functioning of genes abounds but the gene has also become curiously intangible This collection of essays renews the question what are genes Philosophers historians and working scientists re evaluate the question in this volume treating the gene as a focal point of interdisciplinary and international research It will be of interest to professionals and students in the philosophy and history of science genetics and molecular biology Do Straw Men Evolve from Red Herrings Vincent M Cassone, 2025-09-26 This book explores the biodiversity on Earth and describes the journey of humanity across the globe It provides a vision of the multiple expansions of the human form in multiple waves of archaic and then anatomically modern humans from Africa to every continent on the planet It discusses the many ways by which humans and human societies have sought to explain how they and the diverse living world came to be The ultimate goal of this book is to refute creationist strategies for their pseudo scientific and logical perspectives It also intends to spur argument among creationist purveyors and provide armor for scientists seeking to argue with them Pamphlets on Biology ,1892
