history of ideas      Keywords in Evolutionary Biology Evelyn Fox Keller, Elisabeth Anne Lloyd, 1992 In science more than elsewhere a word is expected to mean what it says nothing more nothing less But scientific discourse is neither different nor separable from ordinary language meanings are multiple ambiguities ubiquitous Keywords in Evolutionary Biology grapples with this problem in a field especially prone to the confusion engendered by semantic imprecision Written by historians philosophers and biologists including among others Stephen Jay Gould Diane Paul John Beatty Robert Richards Richard Lewontin David Sloan Wilson Peter Bowler and Richard Dawkins these essays identify and explicate those terms in evolutionary biology which though commonly used are plagued by multiple concurrent and historically varying meanings By clarifying these terms in their many guises the editors Evelyn Fox Keller and Elisabeth Lloyd hope to focus attention on major scholarly problems in the field problems sometimes obscured sometimes reveals and sometimes even created by the use of such equivocal words Competition adaptation and fitness for instance are among the terms whose multiple meaning have led to more than merely semantic debates in evolutionary biology Exploring the complexity of keywords and clarifying their role in prominent issues in the field this book will prove invaluable to scientists and philosophers trying to come to terms with evolutionary theory it will also serve as a useful guide to future research into the way in which scientific language works

**Disputed Inheritance** Gregory Radick, 2023-08-18 A root and branch rethinking of how history has shaped the science of genetics In 1900 almost no one had heard of Gregor Mendel Ten years later he was famous as the father of a new science of heredity genetics Even today Mendelian ideas serve as a standard point of entry for learning about genes The message students receive is plain the twenty first century owes an enlightened understanding of how biological inheritance really works to the persistence of an intellectual inheritance that traces back to Mendel's garden Disputed Inheritance turns that message on its head As Gregory Radick shows Mendelian ideas became foundational not because they match reality little in nature behaves like Mendel's peas but because in England in the early years of the twentieth century a ferocious debate ended as it did On one side was the Cambridge biologist William Bateson who in Mendel's name wanted biology and society reorganized around the recognition that heredity is destiny On the other side was the

Oxford biologist W F R Weldon who admiring Mendel's discoveries in a limited way thought Bateson's Mendelism represented a backward step since it pushed growing knowledge of the modifying role of environments internal and external to the margins Weldon's untimely death in 1906 before he could finish a book setting out his alternative vision is Radick suggests what sealed the Mendelian victory Bringing together extensive archival research with searching analyses of the nature of science and history Disputed Inheritance challenges the way we think about genetics and its possibilities past present and future
