**Chemoprophylaxis and Virus Infections of the Respiratory Tract** J.S. Oxford, 2018-10-24 Originally it was our intention to produce a single volume book covering all aspects and approaches to the problem of specific inhibitors of respiratory viruses However as the work progressed it became obvious that certain chapters because of the research interests of the authors concentrated particularly on influenza viruses It seemed logical therefore to divide the book into two volumes the first emphasizing influenza and the second concentrating on other viruses as well as discussing important general aspects of drug screening and clinical testing although the second volume does have some chapters which deal mainly with influenza

**Human Respiratory Syncytial Virus Infection** Bernhard Resch, 2011-11-25 In this online Open Access book on Human RSV Infections several distinguished authors contribute their experience in respiratory syncytial virology A major focus lies on the fascinating pathophysiology of RSV and represents recent and actual work on different mechanisms involved in the complex pathogenesis of the virus The second section elucidates epidemiologic and diagnostic aspects of RSV infection covering a more clinical view of RSV disease At last treatment modalities including the search for a vaccine that is still not in sight are discussed and conclude this book thus building up a circle that runs from experimental models of RSV related lung disease over clinical aspects of disease to the latest news of therapeutic and prophylactic approaches to human RSV infection

Globalisation is influencing not only patterns of health and disease worldwide but how decisions on health are made and organised This is the arena of Global Health Governance Despite some successes in developing better global governance for health progress overall has been disappointingly slow This is especially so given the number of health crises today some of which are long standing but others relatively new This book explores how progress has often been limited but also on occasion assisted by the role of ideas It identifies how health issues such as HIV AIDS pandemic influenza and tobacco control are framed in such a way as to resonate with a set of ideas or worldviews associated with particular policy communities A successful framing can generate possibilities for action but can also lead to competition when ideas conflict or

suggest different pathways of response Global Health Governance therefore is an arena of competition as well as cooperation where ideas matter as well as resources and political will This book was originally published as a special issue of Global Public Health

[The Threat of Pandemic Influenza](#) Institute of Medicine,Board on Global Health,Forum on Microbial Threats,2005-04-09 Public health officials and organizations around the world remain on high alert because of increasing concerns about the prospect of an influenza pandemic which many experts believe to be inevitable Moreover recent problems with the availability and strain specificity of vaccine for annual flu epidemics in some countries and the rise of pandemic strains of avian flu in disparate geographic regions have alarmed experts about the world s ability to prevent or contain a human pandemic The workshop summary The Threat of Pandemic Influenza Are We Ready addresses these urgent concerns The report describes what steps the United States and other countries have taken thus far to prepare for the next outbreak of killer flu It also looks at gaps in readiness including hospitals inability to absorb a surge of patients and many nations incapacity to monitor and detect flu outbreaks The report points to the need for international agreements to share flu vaccine and antiviral stockpiles to ensure that the 88 percent of nations that cannot manufacture or stockpile these products have access to them It chronicles the toll of the H5N1 strain of avian flu currently circulating among poultry in many parts of Asia which now accounts for the culling of millions of birds and the death of at least 50 persons And it compares the costs of preparations with the costs of illness and death that could arise during an outbreak
