registration feature detection and modelling cardiovascular image analysis shape modelling and analysis segmentation and detection measurement and quantitative analysis and analysis of image sequences and functional imaging Catalog National Library of Medicine (U.S.), 1993-04 Attribute Grammars, Applications and Systems Henk Alblas, Borivoj Melichar, 1991-10-23 Attribute grammars have shown themselves to be a useful formalism for specifying the syntax and the static semantics of programming languages They are also useful for implementing syntax directed editors compilers translator writing systems and compiler generators and any application that has a strong syntactic base However no textbooks are available that cover the entire field To redress this imbalance an International Summer School on Attribute Grammars Applications and Systems was held in Prague Czechoslovakia in June 1991 The course aimed at teaching the state of the art in attribute grammars and their relation to other language specification methods. This volume presents the proceedings of the school The papers are well suited for self study and a selection of them can be used for introductory courses in attribute grammars Model-Reference Robust Tuning of PID Controllers Victor M. Alfaro, Ramon Vilanova, 2016-04-16 This book presents a unified methodology for the design of PID controllers that encompasses the wide range of different dynamics to be found in industrial processes. This is extended to provide a coherent way of dealing with the tuning of PID controllers The particular method at the core of the book is the so called model reference robust tuning MoReRT developed by the authors MoReRT constitutes a novel and powerful way of thinking of a robust design and taking into account the usual design trade offs encountered in any control design problem. The book starts by presenting the different two degree of freedom PID control algorithm variations and their conversion relations as well as the indexes used for performance robustness and fragility evaluation the bases of the proposed model Secondly the MoReRT design methodology and normalized controlled process models and controllers used in the design are described in order to facilitate the formulation of the different design problems and subsequent derivation of tuning rules Inlater chapters the application of MoReRT to over damped inverse response integrating and unstable processes is described The book ends by presenting three possible extensions of the MoReRT methodology thereby opening the door to new research developments In this way the book serves as a reference and source book for academic researchers who may also consider it as a stimulus for new ideas as well as for industrial practitioners and manufacturers of control systems who will find appropriate advanced solutions to many application problems Foundations of Computational Mathematics Felipe Cucker, Michael Shub, 2012-12-06 This book contains a collection of articles corresponding to some of the talks delivered at the Foundations of Computational Mathematics conference held at IMPA in Rio de Janeiro in January 1997 Some of the others are published in the December 1996 issue of the Journal of Complexity Both of these publications were available and distributed at the meeting Even in this aspect we hope to have achieved a synthesis of the mathematics and computer science cultures as well as of the disciplines The reaction to the Park City meeting on Mathematics of Numerical Analy sis Real Number Algorithms

which was chaired by Steve Smale and had around 275 participants was very enthusiastic At the suggestion of Narendra Karmar mar a lunch time meeting of Felipe Cucker Arieh Iserles Narendra Karmarkar Jim Renegar Mike Shub and Steve Smale decided to try to hold a periodic meeting entitled Foundations of Computational Mathematics and to form an organization with the same name whose primary purpose will be to hold the meeting This is then the first edition of FoCM as such It has been organized around a small collection of workshops namely Systems of algebraic equations and computational algebraic geometry Homotopy methods and real machines Information based complexity Numerical linear algebra Approximation and PDEs Optimization Differential equations and dynamical systems Relations to computer science Vision and related computational tools There were also twelve plenary speakers **Program Development by Refinement** Emil Sekerinski, Kaisa Sere, 2012-12-06 The Idea of Program Refinement Programs are complex They are typically so complex that they go beyond the full comprehension even of the programmer or team who designed them with all the consequences this has How can we cope with such complexity in a satisfactory way An approach advocated for a long time is to separate a concise specification of a program the what from a possibly involved implementation the how Once a specification is obtained from the set of requirements on the program there can still be a large gap to an efficient implementation The development from specification to implementation can then proceed by a succession of layers such that each layer is a refinement of the previous one Design decisions can be introduced in refinement steps one at a time By this the refinement steps can be kept small and manageable Still the set of all requirements can be far too large to be taken completely into account in the initial specification Even if they could they might obscure issues more than clarify them For example An information system for stored goods needs to produce an error message on il legal input Yet the exact wording and even the language of those messages is irrelevant for an understanding of the essence of the system A banking application interacts with customers with a graphical interface Yet the specification of the graphical layout is secondary compared to the specification of the possible Network World ,1987-02-16 For more than 20 years Network World has been the premier provider of transactions information intelligence and insight for network and IT executives responsible for the digital nervous systems of large organizations Readers are responsible for designing implementing and managing the voice data and video systems their companies use to support everything from business critical applications to employee collaboration and electronic commerce

National Library of Medicine Current Catalog National Library of Medicine (U.S.),1986 Theorem Provers in Circuit Design Victoria Stavridou, Tom F. Melham, Raymond T. Boute, 1992 The papers in this volume address the role of mechanized theorem proving technology in the design of digital systems The primary focus is on the practical application of theorem provers to digital design rather than on theoretical foundations. The diverse contributions include invited papers by the leading researchers Gordon and Hunt as well as technical contributions by many other prominent researchers in the field of machine assisted hardware verification. This side of the Proceedings reflects current research activity and the section

containing tutorial papers on several influential theorem provers serves as an introduction to this exciting field Use of Services for Family Planning and Infertility, United States Gerry E. Hendershot, Karl E. Bauman, 1988 Database and Expert Systems Applications Dimitris Karagiannis, 2013-11-11 The Database and Expert Systems Applications DEXA conferences are dedicated to providing an international forum for the presentation of applications in the database and expert systems field for the exchange of ideas and experiences and for defining requirements for the future systems in these fields After the very promising DEXA 90 in Vienna Austria we hope to have successfully established with this year s DEXA 91 a stage where scientists from diverse fields interested in application oriented research can present and discuss their work This year there was a total of more than 250 submitted papers from 28 different countries in all continents Only 98 of the papers could be accepted The collection of papers in these proceedings offers a cross section of the issues facing the area of databases and expert systems i e topics of basic research interest on one hand and guestions occurring when developing applications on the other Major credit for the success of the conference goes to all of our colleagues who submitted papers for consideration and to those who have organized and chaired the panel sessions Many persons contributed numerous hours to organize this conference The names of most of them will appear on the following pages In particular we wish to thank the Organization Committee Chairmen Johann Gordesch A Min Tjoa and Roland Wag ner who also helped establishing the program Special thanks also go to Gabriella Wagner and Anke Ruckert Dimitris Karagiannis General Conference Chairman Parallel Programming and Compilers Constantine D. Polychronopoulos, 2012-12-06 **Contents Conference Committee** The second half of the 1970s was marked with impressive advances in array vector architectures and vectorization techniques and compilers This progress continued with a particular focus on vector machines until the middle of the 1980s The major ity of supercomputers during this period were register to register Cray 1 or memory to memory CDC Cyber 205 vector pipelined machines However the increasing demand for higher computational rates lead naturally to parallel comput ers and software Through the replication of autonomous processors in a coordinated system one can skip over performance barriers due technology limitations In princi ple parallelism offers unlimited performance potential Nevertheless it is very difficult to realize this performance potential in practice So far we have seen only the tip of the iceberg called parallel machines and parallel programming Parallel programming in particular is a rapidly evolving art and at present highly empirical In this book we discuss several aspects of parallel programming and parallelizing compilers Instead of trying to develop parallel programming methodologies and paradigms we often focus on more advanced topics assuming that the reader has an adequate background in parallel processing The book is organized in three main parts In the first part Chapters 1 and 2 we set the stage and focus on program transformations and parallelizing compilers The second part of this book Chapters 3 and 4 discusses scheduling for parallel machines from the practical point of view macro and microtasking and supporting environments Finally the last part Le Energy Research Abstracts ,1988 American Book Publishing
