Information Criteria and Statistical Modeling Sadanori Konishi, Genshiro Kitagawa, 2008 Statistical modeling is a critical tool in scientific research This book provides comprehensive explanations of the concepts and philosophy of statistical modeling together with a wide range of practical and numerical examples The authors expect this work to be of great value not just to statisticians but also to researchers and practitioners in various fields of research such as information science computer science engineering bioinformatics economics marketing and environmental science It s a crucial area of study as statistical models are used to understand phenomena with uncertainty and to determine the structure of complex systems They re also used to control such systems as well as to make reliable predictions in various natural and social science fields

Information Criteria and Statistical Modeling Sadanori Konishi, Genshiro Kitagawa, 2008 The Akaike information criterion AIC derived as an estimator of the Kullback Leibler information discrepancy provides a useful tool for evaluating statistical models and numerous successful applications of the AIC have been reported in various fields of natural sciences social sciences and engineering One of the main objectives of this book is to provide comprehensive explanations of the concepts and derivations of the AIC and related criteria including Schwarz s Bayesian information criterion BIC together with a wide range of practical examples of model selection and evaluation criteria A secondary objective is to provide a theoretical basis for the analysis and extension of information criteria via a statistical functional approach A generalized information criterion GIC and a bootstrap information criterion are presented which provide unified tools for modeling and model evaluation for a diverse range of models including various types of nonlinear models and model estimation procedures such as robust estimation the maximum penalized likelihood method and a Bayesian approach **Bayesian Statistical**

Modeling with Stan, R, and Python Kentaro Matsuura, 2023-01-24 This book provides a highly practical introduction to Bayesian statistical modeling with Stan which has become the most popular probabilistic programming language The book is divided into four parts The first part reviews the theoretical background of modeling and Bayesian inference and presents a modeling workflow that makes modeling more engineering than art The second part discusses the use of Stan CmdStanR and CmdStanPy from the very beginning to basic regression analyses The third part then introduces a number of probability distributions nonlinear models and hierarchical multilevel models which are essential to mastering statistical modeling It also describes a wide range of frequently used modeling techniques such as censoring outliers missing data speed up and parameter constraints and discusses how to lead convergence of MCMC Lastly the fourth part examines advanced topics for real world data longitudinal data analysis state space models spatial data analysis Gaussian processes Bayesian optimization dimensionality reduction model selection and information criteria demonstrating that Stan can solve any one of these problems in as little as 30 lines Using numerous easy to understand examples the book explains key concepts which continue to be useful when using future versions of Stan and when using other statistical modeling tools The examples do not require

domain knowledge and can be generalized to many fields The book presents full explanations of code and math formulas enabling readers to extend models for their own problems All the code and data are on GitHub
