## **Informing Clinical Practice In Nephrology Informing Clinical Practice In Nephrology:**

**Informing Clinical Practice in Nephrology** Mohsen El Kossi, Arif Khwaja, Meguid El Nahas, 2015-04-01 Historically clinical decisions in renal medicine have been challenged by the scarce availability of robust supportive evidence Not only are the number of randomized controlled trials RCTs in Nephrology the third lowest amongst the medical specialties but in many instances the trials themselves are of poor quality In addition practice has been further influenced by extrapolation from the outcomes of general population clinical trials which exclude renal patients The difference between the ideal trial participant and real complex cases encountered in daily practice is well recognized and further compounded in renal patients with complex pathophysiology this ultimately makes decision making in this subset of patients a real challenge Recently there has been a growing interest in conducting well designed RCTs in different areas of renal medicine However though clinical guidelines are helpful in providing the clinicians with a frame of best available evidence for a clinical condition it denies the unique nature of each individual patient This book offers a thorough and critical appraisal and evaluation of the key published clinical trials that have shaped current practice in nephrology dialysis and transplantation It will help the practicing physician close the gap between the inflexible and generalized nature of clinical guidelines and the day to day clinical decision making for individual patients It will provide the clinician with the tools required to investigate and extract the appropriate guidance to apply to individual cases in daily practice Moreover it will help improve the ability of junior colleagues to appraise available evidence in a systematic way when there is lack of local guidelines or when the guidelines are difficult to apply due to logistic constraints or barriers Lastly this book will serve as a reference for key clinical trials in different areas of renal medicine together with literature and authors views of these trials and their impact on changing practice Clinical Studies, Big Data, and Artificial Intelligence in Nephrology and Transplantation Wisit

Cheungpasitporn, Wisit Kaewput, 2021-09-02 In recent years artificial intelligence has increasingly been playing an essential role in diverse areas in medicine assisting clinicians in patient management In nephrology and transplantation artificial intelligence can be utilized to enhance clinical care such as through hemodialysis prescriptions and the follow up of kidney transplant patients Furthermore there are rapidly expanding applications and validations of comprehensive computerized medical records and related databases including national registries health insurance and drug prescriptions For this Special Issue we made a call to action to stimulate researchers and clinicians to submit their invaluable works and present here a collection of articles covering original clinical research single or multi center database studies from registries meta analyses and artificial intelligence research in nephrology including acute kidney injury electrolytes and acid base chronic kidney disease glomerular disease dialysis and transplantation that will provide additional knowledge and skills in the field of nephrology and transplantation toward improving patient outcomes **CLINICAL AUDIT FOR NABH SUCCESS: A**

**PRACTICAL HANDBOOK** Akash Tiwari, 2025-07-07 The healthcare landscape is in a constant state of evolution driven by

advancements in medical science changing patient demographics and increasing demands for accountability This dynamic environment necessitates continuous adaptation and improvement in healthcare practices The imperative for quality and safety in healthcare has never been more pronounced Patients regulatory bodies employers and colleagues consistently demand high quality safe and effective care Clinical audit stands as a fundamental mechanism to ensure these standards are not only met but consistently improved upon It provides a structured framework for healthcare organizations to be accountable for continuously enhancing service quality and upholding high standards of care 1 A significant challenge in healthcare is bridging the gap between new knowledge and its application in daily practice While rigorous research generates vital new knowledge identifying which treatments are superior or defining the characteristics of good practice in unexplored areas clinical audit is the process that takes this established knowledge and ensures it is effectively applied It compares current clinical practice against well defined and established standards ensuring that healthcare professionals are consistently doing what is known to work best and doing it effectively 1 This book is crafted to empower all healthcare workers equipping them with the understanding and practical tools necessary to actively participate in improving patient care and their working environment By engaging in clinical audit professionals contribute directly to enhancing the quality efficiency and safety of the services they provide ultimately benefiting patients worldwide
