Global Optimization in Action János D. Pintér, 1995-11-30 In science engineering and economics decision problems are frequently modelled by optimizing the value of a primary objective function under stated feasibility constraints In many cases of practical relevance the optimization problem structure does not warrant the global optimality of local solutions hence it is natural to search for the globally best solution s Global Optimization in Action provides a comprehensive discussion of adaptive partition strategies to solve global optimization problems under very general structural requirements A unified approach to numerous known algorithms makes possible straightforward generalizations and extensions leading to efficient computer based implementations A considerable part of the book is devoted to applications including some generic problems from numerical analysis and several case studies in environmental systems analysis and management The book is essentially self contained and is based on the author s research in cooperation on applications with a number of colleagues Audience Professors students researchers and other professionals in the fields of operations research management science industrial and applied mathematics computer science engineering economics and the environmental sciences *Essentials of*

Kinetics of Multistep Reactions Friedrich G. Helfferich,2004-09-15 This book addresses primarily the engineer in industrial process development

the research chemist in academia and industry and the graduate student intending to become a reaction engineer In industry competitive pressures put a premium on scale up by large factors to cut development time To be safe such development should be based on fundamental kinetics that reflect the elementary steps of which the reaction consists The book forges fundamental kinetics into a practical tool by presenting new effective methods for elucidation of mechanisms and reduction of complexity without unacceptable sacrifice in accuracy fewer equations lesser computational load fewer coefficients fewer experiment to determine them For network elucidation new rules relating network configurations to observable kinetic behaviour allow incorrect networks to be ruled out by whole classes instead of one by one For modelling general equations and algorithms are given from which equations for specific networks can be recovered by simple substitutions The procedures are illustrated with examples of industrial reactions including among others paraffin oxidation ethoxylation hydroformylation hydrocyanation shape selective catalysis ethane pyrolysis styrene polymerization and ethene oligomerization Many of the rate equations have not been published before The expanded edition of the 2001 title Kinetics of Homogeneous Multistep Reactions includes new chapters on heterogeneous catalysis and periodic and chaotic reactions new sections on adsorption statistical methods and lumping and other new detail Contains new chapters on heterogeneous catalysis oscillations and chaos Includes new sections on statistical methods lumping adsorption and software and databases Provides a better understanding of complex reaction mechanisms
