Innovation And The Development Of Flight:

Innovation and the Development of Flight Roger D. Launius, 1999 Perhaps no technological development in the century has more fundamentally transformed human life than the airplane and its support apparatus The nature of flight and the activities that it has engendered throughout the world makes the development of aviation technology an important area of investigation Why did aeronautical technology take the shape it did Which individuals and organizations were involved in driving it What factors influenced particular choices of technologies to be used More importantly how has innovation affected this technology Innovation and the Development of Flight a first strike at the new aviation history represents a significant transformation of the field by relating the subject to larger issues of society politics and culture taking a more sophisticated view of the technology that few historians have previously attempted This volume moves beyond a focus on the artifact to emphasize the broader role of the airplane and more importantly the entire technological system This suggests that many unanswered questions are present in the development of modern aviation and that inquisitive historians seek to know the relationships of technological systems to the human mind Some of the subjects discussed are early aeronautical innovation and government patronage the evolution of relationships among airports cities and industry the relationship of engine development to the entire aviation industry the Department of Commerce s influence on light plane development pressure in the Air Force for the development of jet engines and lessons of the National Aerospace Plane Program Aviation historians and historians of technology will find Innovation and the Development of Flight a valuable examination of aeronautical innovation providing foundations for continued explorations of this field *History Of Flight: Early Innovations That Changed Aviation*

Technological, Managerial and Organizational Core Competencies: Dynamic Innovation and Sustainable Development Nobre, Farley Simon, 2011-09-30

Innovation involves a set of processes which support the production and transformation of knowledge into new processes, technologies, and products, goods, and services, and provide an organization with particular strengths and value relative to other firms. In such a view, innovation is a key source of customer benefits and sustainable competitive advantage.

Technological, Managerial and Organizational Core Competencies: Dynamic Innovation and Sustainable Development investigates the impact of knowledge management, information systems, finance, organizational networks, internationalization, strategic management, marketing, entrepreneurship, and sustainability on an organization that pursues dynamic innovation and sustainable advantage. This book provides research and practice for graduate and undergraduate programs, as well as business firms, with different technological, managerial, and organizational perspectives.

Further Description from the Editors: This book represents the culmination of an international project to compile interdisciplinary research that most contributes to innovation. More specifically, this book is about innovation in firms, industries, nations, and society. It speaks to professionals and researchers who want to improve their understanding of dynamic innovation and sustainable development. The Editors' goal is to foster cross-pollination among researchers. To this aim, the Editors have selected and assembled 35 chapters that illustrate multidisciplinary theoretical perspectives and empirical results on innovation and the roles of Sustainability, Organizational Networks, Entrepreneurship, Knowledge Management, R D T (Research, Development, and Technology), Management, Marketing, Finance, Internationalization, and Information Systems in the organization that pursues dynamic innovation and sustainable development. Innovation involves processes, organizational elements or resources, and Organizational Abilities (OA) that support the production and transformation of knowledge into new knowledge processes, structures, technologies, and products, goods, and services. At the firm and industry levels of analysis, innovation can provide

organizations with strengths relative to other firms clusters and nations and it is a key source of customer benefits and sustainable development At the collective and societal levels of analysis innovation can provide humanity with economic social and environmental wealth through sustainable development The uniqueness of this book lies in the participants efforts to identify Organizations Creative Areas OCA that can provide core competencies for the organization in pursuit of dynamic innovation and sustainable development In this perspective innovation is a dynamic system and it is contingent upon a set of core competencies that couple to each other Therefore changing of even one competence can affect the organization s ability to innovate The book avoids the term competitive advantage and adopts a more fruitful perspective of sustainable development the process of achieving human development in an inclusive connected equitable prudent and secure manner An inclusive perspective sees traditional competitive advantage as occupying one extreme whereas truly sustainable development occupies the opposite extreme Sustainable development must benefit not only the organization and its customers but also the whole society and the future of humanity through sustainability Most chapters of this book fall between these extremes
