Committee on Industrial Ventilation, 1988 **Guidelines for Initiating Events and Independent Protection Layers in Layer of Protection Analysis** CCPS (Center for Chemical Process Safety), 2015-02-03 The book is a guide for Layers of Protection Analysis LOPA practitioners It explains the onion skin

model and in particular how it relates to the use of LOPA and the need for non safety instrumented independent protection layers. It provides specific guidance on Independent Protection Layers (IPLs) that are not Safety Instrumented Systems (SIS). Using the LOPA methodology, companies typically take credit for risk reductions accomplished through non SIS alternatives i.e. administrative procedures, equipment design etc. It addresses issues such as how to ensure the effectiveness and maintain reliability for administrative controls or inherently safer passive concepts. This book will address how the fields of Human Reliability Analysis, Fault Tree Analysis, Inherent Safety Audits and Assessments, Maintenance and Emergency Response relate to LOPA and SIS. The book will separate IPLs into categories such as the following:

- Inherent Safety: eliminates a scenario or fundamentally reduces a hazard.
- Preventive Proactive: prevents initiating event from occurring such as enhanced maintenance.
- Preventive Active: stops chain of events after initiating event occurs but before an incident has occurred such as high level in a tank shutting off the pump.
- Mitigation active or passive: minimizes impact once an incident has occurred such as closing block valves once LEL is detected in the dike.
- Active or the dike preventing contamination of groundwater.
- Passive: *Industrial Ventilation* Acgih, American Conference of Governmental Industrial Hygienists, 2010.
