How psychopathic corporations, stupidity, and structural racism raid America's wealth. The book is a serious scientific exploration of neurodevelopment on which policy and personal behavior changes can be based to improve health, happiness, and intellectual curiosity. Section I section lays out an description of the Intelligence Quotient (IQ) and why it can be used as a proxy for neurodevelopment. It explains IQ tests and other developmental scales, scoring, and some of their limitations. The high metabolic cost of a large brain and the survival advantage provided by epigenetic adaptation to downsize the brain to the current environmental conditions is described, explaining why a less costly and less intelligent brain are adaptive to leaner times. An estimate is made for the average human IQ in full health and nutrition, about two standard deviations above the current average, or an IQ of 130. A primer on inflammation is given. Section 2 discusses the impact of anemia and iron on brain development. Topics include Hookworm, malaria, and infections. Most of this section discusses iron deficiency, iron supplementation in pregnancy and infancy, and the role of other minerals and vitamins required for blood formation. Section 3 covers the role of iodine and

thyroid hormone on neurodevelopment The following chapters discuss thyroid hormone disruptors including fluoride and bromide organohalogens thyroid disrupting organic pollutants organophosphates and other biocides and foods and food additives that impact thyroid function Section 4 covers neurotoxic metals in the environment The neurotoxic metals that most commonly impact brain health are discussed including arsenic lead mercury manganese The impacts of cadmium and aluminum on fetal and infant health are reviewed Toxic metal exposure during development most commonly occurs from water contamination and Chapter 18 covers water filtration for removal of these toxins Section 5 discusses the role of toxic metals dietary factors and the role of the intestinal microbiome on the causation and exacerbation of autism spectrum disorder Evidence on the role of special diets for ASD is reviewed The timing of the development of ASD is discussed as it is essential to understanding which exposures are relevant and amenable to treatment Section 6 discussed the generation of air pollution from combustion of fuels and the adverse impacts of it on brain health Effects of Particulate matter PM on health Alzheimer s and Parkinson s disease are reviewed along with its effects on the premature birth of infants neurodevelopment IQ and autism Mitigation of risk is discussed Section 7 outlines maternal factors that impact neurodevelopment and intelligence The causes and effects of preterm birth and small for gestational age are explored with a particular focus on environmental influences Section 8 covers the effect of general health on neurodevelopment including the impact of diet on the intestinal microbiome exercise sleep deprivation sleep disordered breathing and explains the roll of lifestyle in ADHD Section 9 discusses the effects of psychosocial stress on neurodevelopment and intellectual performance and discusses the epigenetic effects of stress on brain development and behavior The role of having a supportive social environment a stimulating environment and education on brain development IQ an health are discussed The effects of prenatal stress on the brain are reviewed Other topics include the effect of stress and telomere length the effects of poverty or domestic violence on IQ score and the effects of stress on the hypothalamic pituitary adrenal axis and on the gut The effects of noise on hearing academic performance and sleep are reviewed The need to confront endemic stress as a societal norm is discussed
