Handbook of Spatial Point-Pattern Analysis in Ecology Thorsten Wiegand, Kirk A. Moloney, 2013-12-20 This handbook shows how the techniques of point pattern analysis are useful for tackling ecological problems Within an ecological framework it guides readers through a variety of methods for different data types and aids in the interpretation of the results obtained by point pattern analysis Along with the techniques the book provides a comprehensive selection of real world examples Most of the examples are analyzed using the authors software package Programita The software and a manual are available online **Spatial Linear Models for Environmental Data** Dale L. Zimmerman, Jay M. Ver Hoef, 2024-04-17

Many applied researchers equate spatial statistics with prediction or mapping but this book naturally extends linear models which includes regression and ANOVA as pillars of applied statistics to achieve a more comprehensive treatment of the analysis of spatially autocorrelated data *Spatial Linear Models for Environmental Data* aimed at students and professionals with a master s level training in statistics presents a unique applied and thorough treatment of spatial linear models within a statistics framework Two subfields one called geostatistics and the other called areal or lattice models are extensively covered Zimmerman and Ver Hoef present topics clearly using many examples and simulation studies to illustrate ideas By mimicking their examples and R code readers will be able to fit spatial linear models to their data and draw proper scientific conclusions Topics covered include Exploratory methods for spatial data including outlier detection semi variograms Moran s I and Geary s c Ordinary and generalized least squares regression methods and their application to spatial data Suitable parametric models for the mean and covariance structure of geostatistical and areal data Model fitting including inference methods for explanatory variables and likelihood based methods for covariance parameters Practical use of spatial linear models including prediction kriging spatial sampling and spatial design of experiments for solving real world problems All concepts are introduced in a natural order and illustrated throughout the book using four datasets All analyses tables and figures are completely reproducible using open source R code provided at a GitHub site Exercises are given at the end of each chapter with full solutions provided on an instructor s FTP site supplied by the publisher *Biometry for Forestry and Environmental Data* Lauri Mehtätalo, Juha Lappi, 2020-05-27 *Biometry for Forestry and Environmental Data with Examples in R* focuses on statistical methods that are widely applicable in forestry and environmental sciences but it also includes material that is of wider interest Features Describes the theory and applications of selected statistical methods and illustrates their use and basic concepts through examples with forestry and environmental data in R Rigorous but easily accessible presentation of the linear nonlinear generalized linear and multivariate models and their mixed effects counterparts Chapters on tree size tree taper measurement errors and forest experiments are also included Necessary statistical theory about random variables estimation and prediction is included The wide applicability of the linear prediction theory is emphasized The hands on examples with implementations using R make it easier for non statisticians to understand

A Bayesian Introduction to Fish Population Analysis Joseph E. Hightower, 2025-09-23 Fisheries science is an applied field A biologist working on a depleted population might need to forecast the population trajectory or examine which factors are limiting recovery For an exploited population a biologist might investigate whether the fishery or the stock would be improved through harvest regulation such as a quota or size limit Addressing those sorts of questions generally involves estimating parameters such as population size or survival rate An essential step is characterizing the degree of uncertainty in results which can be substantial for fisheries models Bayesian methods and current software provide a flexible and powerful framework for addressing these challenges Models developed using Bayesian software can be tailored to the unique aspects of each field study A Bayesian Introduction to Fish Population Analysis is aimed at advanced undergraduate and graduate students as well as working professionals interested in a hands on introduction to Bayesian approaches for fitting fisheries models Chapters address key aspects of population dynamics abundance mortality growth and recruitment The book includes complete R code for simulating each study design and JAGS Bayesian code for model fitting code files are also available online No prior knowledge of R or JAGS is assumed and new commands are introduced gradually through the sequence of examples There is emphasis throughout the book on how to vary simulation settings to develop intuition about fisheries models e g how many fish should be tagged in order to obtain usefully precise results Additional topics include development of integrated population models model checking model selection and uninformative and informative prior distributions Key features include The book begins with a focus on ecologically relevant probability distributions e g binomial Poisson normal lognormal as a foundation for the applied fisheries chapters Subsequent chapters demonstrate Bayesian approaches for estimating abundance mortality growth and recruitment Full open source code is provided for simulation and plotting using R and Bayesian model fitting using JAGS The book demonstrates how simulation can be used to gain a deeper understanding of analytical methods and for planning field studies Joseph E Hightower is a professor emeritus in the Department of Applied Ecology at NC State University His research interests focus on fish population dynamics especially field and analytical methods for estimating population parameters His

Bayesian Applications in Environmental and Ecological Studies with R and Stan Song S. Qian, Mark R. DuFour, Ibrahim Alameddine, 2022-08-29 Modern ecological and environmental sciences are dominated by observational data. As a result, traditional statistical training often leaves scientists ill prepared for the data analysis tasks they encounter in their work. Bayesian methods provide a more robust and flexible tool for data analysis as they enable information from different sources to be brought into the modelling process. *Bayesian Applications in Environmental and Ecological Studies with R and Stan* provides a Bayesian framework for model formulation, parameter estimation, and model evaluation in the context of analyzing environmental and ecological data.

Features An accessible overview of Bayesian methods in environmental and ecological studies. Emphasizes the hypothetical deductive process, particularly model formulation. Necessary background material on Bayesian inference and Monte Carlo simulation. Detailed case studies covering water quality monitoring and assessment, ecosystem response to urbanization, fisheries ecology, and more. Advanced chapter on Bayesian applications including Bayesian networks and a change point model. Complete code for all examples along with the data used in the book are available via GitHub. The book is primarily aimed at graduate students and researchers in the environmental and ecological sciences, as well as environmental management professionals. This is a group of people representing diverse subject matter fields who could benefit from the potential power and flexibility of Bayesian methods.

Future Sustainable Ecosystems Nathaniel K. Newlands, 2016-10-03 *Future Sustainable Ecosystems: Complexity, Risk, Uncertainty* provides an interdisciplinary integrative overview of environmental problem solving using statistics. It shows how statistics can be used to solve diverse environmental and socio-economic problems involving food, water, energy, scarcity, and climate change risks. It synthesizes interdisciplinary theory, concepts, definitions, models, and findings involved in complex global sustainability problem solving, making it an essential guide and reference. It includes real world examples and applications, making the book accessible to a broader interdisciplinary readership. Discussions include a broad, integrated perspective on sustainability, integrated risk, multi-scale changes, and impacts taking place within ecosystems worldwide. State-of-the-art statistical techniques including Bayesian hierarchical, spatio-temporal, agent-based, and game-theoretic approaches are explored. The author then focuses on the real-world integration of observational and experimental data and its use within statistical models.

Bringing Bayesian Models to Life Mevin B. Hooten, Trevor Hefley, 2019-05-15 *Bringing Bayesian Models to Life* empowers the reader to extend, enhance, and implement statistical models for ecological and environmental data analysis. We open the black box and show the reader how to connect modern statistical models to computer algorithms. These algorithms allow the user to fit models that answer their scientific questions without needing to rely on automated Bayesian software. We show how to handcraft statistical models that are useful in ecological and environmental science, including linear and generalized linear models, spatial and time series models.
