Schug,Gunnar Jaehnichen,Sarah Harper,2008-09-02 In the United States about 50 million people suffer from recurrent or chronic pain and nearly 10% of adults take medication for pain daily Further the

disease burden of pain is expected to grow relative to other illnesses and conditions. Despite the advances in pain medicine, most physicians are not equately trained to treat chronic or even acute pain. As in other fields of medicine, pain medicine has long been dominated by expert opinion relying on personal expertise and only recently has a systematic evaluation of treatments in the terms of evidence-based medicine been performed. And also as in other fields of medicine, a lot can be achieved in pain medicine when certain basic diagnostic and therapeutic pathways are followed correctly more than can be achieved when only a few specialists are able to treat these conditions. Standard operating procedures (SOPs) are supposed to be concise practical aids for clinicians standardizing treatments, diagnostic pathways and procedures in one of sometimes many possible ways. Although based on the available evidence, they are not evidence-based guidelines and are not supposed to replace such guidelines. On one hand, evidence-based medicine often leaves many options open since in many cases the available evidence is not sufficient to recommend a specific option. On the other hand, there might be reasons due to clinical practice e.g.
