The Oxford Handbook of Neurolinguistics Greig I. de Zubicaray, Niels O. Schiller, 2019-03-01 Neurolinguistics is a young and highly interdisciplinary field with influences from psycholinguistics psychology aphasiology and cognitive neuroscience as well as other fields Neurolinguistics like psycholinguistics covers aspects of language processing but unlike psycholinguistics it draws on data from patients with damage to language processing capacities or the use of modern neuroimaging technologies such as fMRI TMS or both The burgeoning interest in neurolinguistics reflects that an understanding of the neural bases of this data can inform more biologically plausible models of the human capacity for language The Oxford Handbook of Neurolinguistics provides concise overviews of this rapidly growing field and engages a broad audience with an interest in the neurobiology of language The chapters do not attempt to provide exhaustive coverage but rather present discussions of prominent questions posed by given topics The volume opens with essential methodological chapters Section I Methods covers the key techniques and technologies used to study the neurobiology of language today with chapters structured along the basic divisions of the field Section II addresses the neurobiology of language acquisition during healthy development and in response to challenges presented by congenital and acquired conditions Section III covers the many facets of our articulate brain or speech language pathology and the capacity for language production written spoken and signed Questions regarding how the brain comprehends meaning including emotions at word and discourse levels are addressed in Section IV Finally Section V reaches into broader territory characterizing and contextualizing the neurobiology of language with respect to more fundamental neuroanatomical mechanisms and general cognitive domains

Second Language Acquisition and Lifelong Learning

Simone E. Pfenninger, Julia Festman, David Singleton, 2023-05-05 Language fundamentally defines and distinguishes us as humans as members of society and as individuals As we go through life our relationship with language and with learning shifts and changes but it remains significant This book is an up to date resource for graduate students and researchers in second language L2 acquisition who are interested in language learning across the lifespan The main goal is to survey and evaluate what is known about the linguistic cognition affect associations that occur in L2 learning from birth through senescence passing through the stages of childhood adolescence adulthood and third age the extent to which L2 acquisition may be seen as contributing to healthy and active aging the impact of the development of personalized technology enhanced communicative L2 environments and how these phenomena are to be approached scientifically and methodologically The effects of certain specific variables such as gender socio economic background and bilingualism are also analyzed as we argue that chronological age does not determine the positioning of L2 learners across the lifespan age is part of a complex web of social distinctions such as psychological and individual factors that intersect in the construction of a learner's relative status and opportunities
