**Industrial Robot Applications** E. Appleton, D.J. Williams, 2012-12-06 The hardest data for managers and engineers in charge of the design and implementation of robot systems to acquire is also the most valuable case studies detailing best current practice and the return on investment actually achieved It has been a major goal of the British Robot Association among other professional groups to organise meetings where such case studies are presented and discussed between members but the obvious restrictions of commercial confidentiality lead to considerable difficulty especially in relation to the best recent installations The authors of this book have been in the uniquely privileged position of lecturing in the Cambridge University Production Engineering Tripos a course specially organised in conjunction with a number of leading companies applying robots and automation Actual case studies from these companies form an important part of the course making this book that has emerged from it a uniquely important addition to our Open University Press series **Engineering**

THE REAL THING by Isaac Asimov Back in 1939 when I was still a teenager I began to write and publish a series of stories about robots which for the first time in science fiction were pictured as having been deliberately engineered to do their job safely They were not intended to be creaky Gothic menaces nor outlets for mawkish sentiment They were simply well designed machines Beginning in 1942 I crystallized this notion in what I called The Three Laws of Robotics and in 1950 nine of my robot stories were collected into a book I Robot I did not at that time seriously believe that I would live to see robots in action and robotics becoming a booming industry Yet here we are better yet I am alive to see it But then why shouldn t they be with us Robots fulfil an important role in industry They do simple and repetitive jobs more steadily more reliably and more uncomplainingly than a human being could or should Does a robot displace a human being Certainly but he does so at a job that simply because a robot can do it is beneath the dignity of a human being a job that is no more than mindless drudgery Better and more human jobs can be found for human beings and should
