Phytochemistry, the Military and Health Andrew G. Mtewa, Chukwuebuka Egbuna, 2021-03-02 *Phytochemistry the Military and Health* Phytotoxins and Natural Defenses comes as a response to the gap that there has for so long existed between phytochemistry and survival of both service personnel and civilian communities during and after conflicts Armed conflicts cause a lot of devastation to communities and should be avoided as much as it can be possible The devastation is usually evident in service provisions such as Health Education Water and Food among many others Both service personnel and civilians are affected to various degrees Facilities usually end up being physically destroyed with no essential supplies and or having dysfunctional systems Going with untreated wounds communicable and non communicable diseases for weeks with no medical interventions due to the conflicts disease burdens heavily weigh down on communities as well as security personnel To make the situation even more complicated masses of people are forced to migrate for safety and security reasons likely going with diseases along wherever they go In such instances phytochemicals become handy in providing solutions from first aid basic analgesia antimicrobials and the general improvement of health Phytochemicals are known to play a major role in the day to day management of diseases and health There has been much research into their effectiveness as community medicines and as alternatives to conventional drugs However the role that phytochemicals play in the military counterterrorism and security has been overlooked *Phytochemistry the Military and Health* Phytotoxins and Natural Defenses discusses the roles that phytochemicals play as friends and foes in

the military including insights aimed to help develop antidotes against phytochemicals and other chemical agents used maliciously as weapons Filling a gap between drug discovery security and emergency medicine this book describes which plants can be categorized for protection and controls which can be helpful in times of conflicts and soon after conflicts in military operations and those that can be used as deterrents and as emergency medicines Carefully designed to show the contribution that phytochemicals play in safety and security this book is useful for researchers regulators and anyone interested in plant chemistry Covers the contribution that phytochemicals play in safety and security Contains insights that will help in the development of antidotes against phytochemical and other chemical weapons Categorizes plants in terms of their usefulness as well as the potential security risks they possess Health and Safety Aspects of Food Processing Technologies Abdul Malik,Zerrin Erginkaya,Hüseyin Erten,2019-10-31 Food processing is expected to affect content activity and bioavailability of nutrients the health promoting capacity of food products depends on their processing history Traditional technologies such as the use of antimicrobials and thermal processing are efficient in increasing nutritional value to an extent though they may not be effective at addressing food safety particularly when it comes to maintaining the food s molecular structure Modern food processing plants improve the quality of life for people with allergies diabetics and others who cannot consume some common food elements Food processing can also add extra nutrients such as vitamins Processed foods are often less susceptible to early spoilage than fresh foods and are better suited for long distance transportation from the source to the consumer However food processing can also decrease the nutritional value of foods and introduce hazards not encountered with naturally occurring products Processed foods often include food additives such as flavourings and texture enhancing agents which may have little or no nutritive value and may in fact be unhealthy This book deals with the subject of food processing in a unique way providing an overview not only of current techniques in food processing and preservation i e dairy meat cereal vegetables fruits and juice processing etc but also the health and safety aspects food technologies that improve nutritional quality of foods functional foods and nanotechnology in the food and agriculture industry The text also looks into the future by defining current bottlenecks and future research goals This work will serve as a ready reference for the subject matter to students and researchers alike *Plant Food Phytochemicals and Bioactive Compounds in Nutrition and Health* John Oloche Onuh,Yashwant V.
