Policy Conflicts and Inflation Targeting: The Role of Credit Markets Woon Gyu Choi, Mr. David Cook, 2018-04-06 This paper shows that stabilizing volatility in credit growth often conflicts with price stability unusual credit expansions often

occur when inflation is low relative to goals and credit slumps often appear when inflation is overshooting We find that central banks with inflation targeting IT are responsive to credit conditions in both advanced economies and emerging market economies EMEs However EMEs are more sensitive to inflation conditions responding to credit growth only when consistent with IT Macroprudential measures are also deployed to address credit growth volatility when orthodox policy moves would be inconsistent with IT complementing monetary policy

Predicting Fiscal Crises: A Machine Learning Approach Klaus-Peter Hellwig,2021-05-27 In this paper I assess the ability of econometric and machine learning techniques to predict fiscal crises out of sample I show that the econometric approaches used in many policy applications cannot outperform a simple heuristic rule of thumb Machine learning techniques elastic net random forest gradient boosted trees deliver significant improvements in accuracy Performance of machine learning techniques improves further particularly for developing countries when I expand the set of potential predictors and make use of algorithmic selection techniques instead of relying on a small set of variables deemed important by the literature There is considerable agreement across learning algorithms in the set of selected predictors Results confirm the importance of external sector stock and flow variables found in the literature but also point to demographics and the quality of governance as important predictors of fiscal crises Fiscal variables appear to have less predictive value and public debt matters only to the extent that it is owed to external creditors
