Handbook Of Mathematical Fuzzy Logic Volume 2 Studies In Logic:

Petr Hájek on Mathematical Fuzzy Logic Franco Montagna, 2014-09-23 This volume celebrates the work of Petr Hájek on mathematical fuzzy logic and presents how his efforts have influenced prominent logicians who are continuing his work. The book opens with a discussion on Hájek's contribution to mathematical fuzzy logic and with a scientific biography of him. It progresses to include two articles with a foundation flavour that demonstrate some important aspects of Hájek's production: namely a paper on the development of fuzzy sets and another paper on some fuzzy versions of set theory and arithmetic. Articles in the volume also focus on the treatment of vagueness, building connections between Hájek's favorite fuzzy logic and linguistic models of vagueness. Other articles introduce alternative notions of consequence relation, namely the preservation of truth degrees, which is discussed in a general context and the differential semantics. For the latter, a surprisingly strong standard completeness theorem is proved. Another contribution also looks at two principles valid in classical logic and characterizes the three main t -norm logics in terms of these principles. Other articles with an algebraic flavour offer a summary of the applications of lattice ordered groups to many valued logic and to quantum logic, as well as an investigation of prelinearity in varieties of pointed lattice ordered algebras that satisfy a weak form of distributivity and have a very weak implication. The last part of the volume contains an article on possibilistic modal logics defined over MTL chains, a topic that Hájek discussed in his celebrated work *Metamathematics of Fuzzy Logic*, and another one where the authors, besides offering unexpected premises such as proposing to call Hájek's basic fuzzy logic HL instead of BL, propose a very weak system called SL as a candidate for the role of the really basic fuzzy logic. The paper also provides a generalization of the prelinearity axiom, which was investigated by Hájek in the context of fuzzy logic.

[Handbook of Mathematical Fuzzy Logic](#) Petr Cintula, Petr Hájek, Carles Noguera, 2011 Originating as an attempt to provide solid logical foundations for fuzzy set theory and motivated also by philosophical and computational problems of vagueness and imprecision, Mathematical Fuzzy Logic (MFL) has become a significant subfield of mathematical logic. Research in this area focuses on many valued logics with linearly ordered truth values and has yielded elegant and deep mathematical theories and challenging problems, thus continuing to attract an ever increasing number of researchers. This two volume handbook provides an up to date systematic presentation of the best developed areas of MFL. Its intended audience is researchers working on MFL or related fields who may use the text as a reference book and anyone looking for a comprehensive introduction to MFL. Despite being located in the realm of pure mathematical logic, this handbook will also be useful for readers interested in logical foundations of fuzzy set theory or in a mathematical apparatus suitable for dealing with some philosophical and linguistic issues related to vagueness. The first volume contains a gentle introduction to MFL, a presentation of an abstract algebraic framework for MFL, chapters on proof theory and algebraic semantics of fuzzy logics, and finally an algebraic study of Hájek's logic BL. The second volume is devoted to Łukasiewicz logic and MV-algebras, Gödel-Dummett logic and its variants, fuzzy logics in expanded propositional languages.

Human-Centric Information Processing Through Granular Modelling Andrzej Bargiela,Witold Pedrycz,2009-02-26 Information granules and their processing permeate a way in which we perceive the world carryout processing at the conceptual abstract level and communicate our findings to the surrounding environment The importance of information granulation becomes even more apparent when we are faced with a rapidly growing flood of data become challenged to make decisions in complex data settings and are required to appreciate the context from which the data is derived Human centricity of systems that claim to be intelligent and the granular computing come hand in hand It is not surprising at all to witness that the paradigm of Granular Computing has started to gain visibility and continues along this path by gathering interest from the circles of academics and practitioners It is quite remarkable that the spectrum of application and research areas that have adopted information granulation as a successful strategy for dealing with information complexity covers such diverse fields as bioinformatics image understanding environmental monitoring urban sustainability to mention few most visible in the literature Undoubtedly there are two important aspects of Granular Computing that are worth stressing First there are several formalisms in which information granules are articulated so be intervals sets fuzzy sets rough sets soft sets approximate sets near sets and alike They are complementary and each of them offers some interesting views at the complexity of the world and cyberspace
