Handbook of Methods for Designing, Monitoring, and Analyzing Dose-Finding Trials John O'Quigley, Alexia Iasonos, Björn Bornkamp, 2017-04-27 Handbook of Methods for Designing Monitoring and Analyzing Dose Finding Trials gives a thorough presentation of state of the art methods for early phase clinical trials The methodology of clinical trials has advanced greatly over the last 20 years and arguably nowhere greater than that of early

phase studies The need to accelerate drug development in a rapidly evolving context of targeted therapies immunotherapy combination treatments and complex group structures has provided the stimulus to these advances Typically we deal with very small samples sequential methods that need to be efficient while at the same time adhering to ethical principles due to the involvement of human subjects Statistical inference is difficult since the standard techniques of maximum likelihood do not usually apply as a result of model misspecification and parameter estimates lying on the boundary of the parameter space Bayesian methods play an important part in overcoming these difficulties but nonetheless require special consideration in this particular context The purpose of this handbook is to provide an expanded summary of the field as it stands and also through discussion provide insights into the thinking of leaders in the field as to the potential developments of the years ahead With this goal in mind we present An introduction to the field for graduate students and novices A basis for more established researchers from which to build A collection of material for an advanced course in early phase clinical trials A comprehensive guide to available methodology for practicing statisticians on the design and analysis of dose finding experiments An extensive guide for the multiple comparison and modeling MCP Mod dose finding approach adaptive two stage designs for dose finding as well as dose time response models and multiple testing in the context of confirmatory dose finding studies John O Quigley is a professor of mathematics and research director at the French National Institute for Health and Medical Research based at the Faculty of Mathematics University Pierre and Marie Curie in Paris France He is author of Proportional Hazards Regression and has published extensively in the field of dose finding Alexia Iasonos is an associate attending biostatistician at the Memorial Sloan Kettering Cancer Center in New York She has over one hundred publications in the leading statistical and clinical journals on the methodology and design of early phase clinical trials Dr Iasonos has wide experience in the actual implementation of model based early phase trials and has given courses in scientific meetings internationally Bj rn Bornkamp is a statistical methodologist at Novartis in Basel Switzerland researching and implementing dose finding designs in Phase II clinical trials He is one of the co developers of the MCP Mod methodology for dose finding and main author of the DoseFinding R package He has published numerous papers on dose finding nonlinear models and Bayesian statistics and in 2013 won the Royal Statistical Society award for statistical excellence in the pharmaceutical industry

Handbook of Approximate Bayesian Computation Scott A. Sisson, Yanan Fan, Mark Beaumont, 2018-09-03 As the world becomes increasingly complex so do the statistical models required to analyse the challenging problems ahead For the very first time in a single volume the Handbook of Approximate Bayesian Computation ABC presents an extensive overview of the theory practice and application of ABC methods These simple but powerful statistical techniques take Bayesian statistics beyond the need to specify overly simplified models to the setting where the model is defined only as a process that generates data This process can be arbitrarily complex to the point where standard Bayesian techniques based on working with tractable likelihood functions would not be viable ABC methods finesse the problem of model complexity within the

Bayesian framework by exploiting modern computational power thereby permitting approximate Bayesian analyses of models that would otherwise be impossible to implement The Handbook of ABC provides illuminating insight into the world of Bayesian modelling for intractable models for both experts and newcomers alike It is an essential reference book for anyone interested in learning about and implementing ABC techniques to analyse complex models in the modern world *Data Clustering with Python* Guojun Gan,2025-09-15 Data clustering an interdisciplinary field with diverse applications has gained increasing popularity since its origins in the 1950s Over the past six decades researchers from various fields have proposed numerous clustering algorithms In 2011 I wrote a book on implementing clustering algorithms in C using object oriented programming While C offers efficiency its steep learning curve makes it less ideal for rapid prototyping Since then Python has surged in popularity becoming the most widely used programming language since 2022 Its simplicity and extensive scientific libraries make it an excellent choice for implementing clustering algorithms Features Introduction to Python programming fundamentals Overview of key concepts in data clustering Implementation of popular clustering algorithms in Python Practical examples of applying clustering algorithms to datasets Access to associated Python code on GitHub This book extends my previous work by implementing clustering algorithms in Python Unlike the object oriented approach in C this book uses a procedural programming style as Python allows many clustering algorithms to be implemented concisely The book is divided into two parts the first introduces Python and key libraries like NumPy Pandas and Matplotlib while the second covers clustering algorithms including hierarchical and partitional methods Each chapter includes theoretical explanations Python implementations and practical examples with comparisons to scikit learn where applicable This book is ideal for anyone interested in clustering algorithms with no prior Python experience required The complete source code is available at <https://github.com/ganml/dcpython> Market Segmentation Analysis Sara Dolnicar,Bettina Grün,Friedrich Leisch,2018-07-20 This book is published open access under a CC BY 4.0 license This open access book offers something for everyone working with market segmentation practical guidance for users of market segmentation solutions organisational guidance on implementation issues guidance for market researchers in charge of collecting suitable data and guidance for data analysts with respect to the technical and statistical aspects of market segmentation analysis Even market segmentation experts will find something new including an approach to exploring data structure and choosing a suitable number of market segments and a vast array of useful visualisation techniques that make interpretation of market segments and selection of target segments easier The book talks the reader through every single step every single potential pitfall and every single decision that needs to be made to ensure market segmentation analysis is conducted as well as possible All calculations are accompanied not only with a detailed explanation but also with R code that allows readers to replicate any aspect of what is being covered in the book using R the open source environment for statistical computing and graphics *A Quantitative Portrait of Analytic Philosophy* Eugenio Petrovich,2024-04-16 This book offers an unprecedented quantitative portrait of

analytic philosophy focusing on two seemingly marginal features of philosophical texts citations and acknowledgements in academic publications Originating from a little network of philosophers based in Oxford Cambridge and Vienna analytic philosophy has become during the Twentieth century a thriving philosophical community with thousands of members worldwide Leveraging the most advanced techniques from bibliometrics citations and acknowledgments are used in this book to shed light on both the epistemology and the sociology of this philosophical field illuminating the intellectual trajectory of analytic philosophy as well as the social characteristics of the analytic community Special attention is dedicated to the last forty years providing insights into a phase of analytic philosophy which is still understudied by historians of philosophy In the eight chapters of the book readers will find not only numerous quantitative investigations and technical explanations but also a robust theoretical framework and epistemological reflections on the strengths and limitations of quantitative methods for the study of philosophy With its strong interdisciplinary appeal this book will engage a wide range of scholars including historians of philosophy seeking new methodologies analytic philosophers interested in a new look at their discipline and scholars in digital humanities bibliometrics and quantitative studies of science who will find many innovative techniques for investigating disciplinary fields
