**Sustainable Supply Chain Management** Balkan Cetinkaya, Richard Cuthbertson, Graham Ewer, Thorsten Klaas-Wissing, Wojciech

Piotrowicz, Christoph Tyssen, 2011-01-27 This book focuses on the need to develop sustainable supply chains economically environmentally and socially This book is not about a wish list of impractical choices but the reality of decisions faced by all those involved in supply chain management today Our definition of sustainable supply chains is not restricted to so called green supply chains but recognises that in order to be truly sustainable supply chains must operate within a realistic financial structure as well as contribute value to our society Supply chains are not sustainable unless they are realistically

funded and valued Thus a real definition of sustainable supply chain management must take account of all relevant economic social and environmental issues This book contains examples from a wide range of real life case studies and synthesizes the learnings from these many different situations to provide the fundamental building blocks at the centre of successful logistics and supply chain management *Exploring Process Management as a Means for Greening Road Freight Transport* Priscilla Navarro, 2019-11-18 Research has proven that we need to reduce our environmental impact Sweden has set a goal to become fossil free by 2045 The increasing amount of transport and the need to reduce its environmental effects has put pressure on the companies of the road freight transport sector Therefore this business sector needs research actions to find tools that will assist in the greening of its services and operations My research is a contribution to these efforts from a managerial point of view Process management is a methodology taken from Total Quality Management TQM that has been used in several business sectors to improve business performance Its process orientation and focus on customers allow companies to identify and satisfy the current and latent needs of their customers Until now TQM has targeted customer needs However it is experiencing a shift towards incorporating societal needs into the equation Environmental sustainability is becoming a societal requirement for companies in all sectors Hence the purpose of my research is to explore the possibilities of using process management to support the greening of small and medium sized companies within the road freight transport sector The frame of reference for my study is based on three well established domains in academia and their intersections These domains are process management road freight transport and environmental sustainability I have used qualitative methods for my research Specifically I performed a case study at two medium sized Swedish companies within the road freight transport business sector The data collection methods involved document studies observations and interviews at each case company The case study was performed using an action research approach which involved setting up meetings seminars and workshops with each case company Additionally joint workshops were performed which allowed me to observe and obtain results from the interactions between the companies The analysis is presented for each case separately and then for their interactions The results are compared with the existing literature from the three domains I based my research on three research questions The first was intended to identify the principles and tools within process management that may be applied to road freight transport companies interested in implementing this methodology to enhance their environmental sustainability I concluded that these principles were present in the companies and are needed for the implementation of process management The tools included in this methodology can be associated with environmental initiatives performed by the companies in support of their greening The second research question refers to the benefits and challenges that companies in this business sector may face when implementing process management methodology I conclude that most of the expected benefits of process management were confirmed Additionally a new benefit was observed reducing the environmental effect of their services can interest current customers and attract new customers to road freight transport

companies The challenges identified during the case study include resistance to change lack of knowledge and resource allocation limitations I also confirmed that a stepwise implementation of process management increases the likelihood of the success of the methodology Hence underdeveloped management systems are also a challenge when this methodology is used in freight transport companies The third and final research question involves the adaptations required for process management to enhance environmental sustainability in companies in this business sector I refer to each of the challenges found and suggest certain requirements for the companies to apply this methodology Clear communication from top management the training of employees and the involvement of all employees are some of these requirements Moreover to incorporate the environmental aspects clearly I suggest environmental efforts for each step in the implementation of process management By including these efforts in the process maturity model I conclude that road freight transport companies could use process management as a means of enhancing environmental sustainability Forskning har visat att vi m ste minska v r milj p verkan Sverige har som m ls ttning att vara fossilfritt 2045 Den kade m ngden transporter och behovet av att s nka milj p verkan har en direkt p verkan p godstransportsf retag D rf r beh vs forsknings tg rder riktade mot dessa f r att hitta verktyg som hj lper till att minska milj p verkan av dess verksamhet och tj nster Min forskning r ett bidrag till dessa anstr ngningar ur ett ledningsperspektiv Processledning r en metodik inom Total Quality Management TQM som har anv nts i flera branscher f r att f rb ttra aff rsresultat Processorientering och fokus p kunderna g r att f retag kan identifiera och tillfredsst lla aktuella och latent behov ifr n deras kunder Fram tills idag s har TQM siktat in sig p kundbehov men just nu p g r en f rflyttning inom TQM mot att ven inkludera samh llsbehov i ekvationen Milj m ssig h llbarhet h ller p att bli ett samh lligt krav f r f retag inom alla branscher D rf r r syftet med min forskning att utforska m jligheterna av att anv nda processledning som ett verktyg f r att minska milj p verkan av sm och medelstora f retag inom godstransportbranschen Min studie baseras p tre v letablerade omr den inom akademien och deras verlapp Omr den r processledning godstransporter och milj m ssig h llbarhet Jag har anv nt kvalitativa metoder f r min forskning Specifikt s genomf rdes en fallstudie vid tv medelstora svenska f retag inom godstransportbranschen Dainsamlingsmetoder som anv ndes var dokumentstudier observationer samt interjuver hos b da f retagen Fallstudien genomf rdes med en aktionsforskningsapproach Aktionsforskningen genomf rdes som m ten seminarier och workshops hos varje f retag Dessutom genomf rdes gemensamma workshops med f retagen vilket gjorde det m jligt att observera och f resultat utifr n samspelet mellan f retagen Analysen presenteras f r varje f retag separat och d refter utifr n deras samspel resultaten j mf rs med existerande litteratur ifr n de tre omr dena Min forskning utg r ifr n tre fr gest llingar Syftet med den f rsta var att identifiera principerna och verktygen inom processledning som kan appliceras p godstransportf retag som r intresserade av att implementera metodiken f r att ka sin milj m ssiga h llbarhet Jag drog slutsatsen att principerna fr n processledning fanns inom f retagen och dom beh vs f r implementeringen av processledningen Verktygen inom den h r metodiken kan associeras med milj initiativ utf rda av f retagen och minska deras

Oreszczyn, Sue, Lane, Andy, 2017-09-06 While there is growing interest in participatory research to address issues around environmental sustainability the focus of analysis tends to be on the results or products of the research rather than the processes involved Addressing this gap the authors draw on their experience of specific mapping techniques based on different systemic concepts and theories that have helped facilitate explore and capture different understandings of the relationships perspectives and boundaries within situations involving environmental sustainability The development of visual mapping techniques is explained and practical case studies describe their application in environmental sustainability projects from working with farmers and their networks to using visual mapping with indigenous communities and managing coastal environments Each case study provides a real world project example from researchers with extensive experience of using these techniques to research different aspects of environmental sustainability over several decades **International**
