Doody's Medical Reviews: Mental Health Practitioners who work with children are often confronted with complex, difficult-to-treat mental health issues that do not respond to conventional methods of psychotherapy. It does not rely on diagnostic categories alone but explores the functioning of children in several dimensions of development and considers multiple levels of influence. The book builds on an individualized, integrated approach to present a variety of evidence-based strategies for working with children with multiple challenges. It considers children from preschool age to adolescence with a number of severe difficulties. These may include extreme aggression, oppositional defiant behavior, significant anxiety and depression, cognitive and academic challenges, delays in speech and language problems with attention and concentration, sensory integration problems, and unresolved trauma.
