Greenhouse Gas Carbon Dioxide Mitigation Science And Technology:

Greenhouse Gas Carbon Dioxide Mitigation Martin M. Halmann, Meyer Steinberg, 1998-11-23 Any mention of the greenhouse effect tends to ignite controversy While the rising atmospheric concentrations of greenhouse gases especially carbon dioxide are certainly among the most pressing issues today theoretical and perceived consequences have been subject to conjecture and misinformation That raging debate has obscured an important fact scientists and engineers are hard at work on methods to reduce CO₂ emissions and devise practical methods for their remediation *Greenhouse Gas Carbon Dioxide Mitigation Science and Technology* sheds light on the most recent advancements documented by two of the world's leading researchers on CO₂ Aware of the complexity and still unknown factors behind climatic change the authors consider the need to make CO₂ mitigation viable for both environmental and economic gain To that end Professor Halmann offers new insights into interesting chemical pathways for the conversion of CO₂ to useful products Steinberg adds real life engineering solutions applicable to heavy CO₂ producing industrial processes and improving efficiency of energy conversion Exciting theories and pilot projects are also testing the potential for CO₂ utilization conversion reduction and disposal *Greenhouse Gas Carbon Dioxide Mitigation Science and Technology* reports on the use of biomass such as ocean fertilization and energy farms to put CO₂ to practical and safe use Professional and academic readers involved with CO₂ research will find *Greenhouse Gas Carbon Dioxide Mitigation Science and Technology* an invaluable roadmap for information and inspiration a way to move beyond argument and into action

Supported Layered Double Hydroxides as CO₂ Adsorbents for Sorption-enhanced H₂ Production Diana Iruretagoyena Ferrer, 2016-07-15 This thesis presents a combination of material synthesis and characterization with process modeling In it the CO₂ adsorption properties of hydrotalcites are enhanced through the production of novel supported hybrids carbon nanotubes and graphene oxide and the promotion with alkali metals Hydrogen is regarded as a sustainable energy carrier since the end users produce no carbon emissions However given that most of the hydrogen produced worldwide comes from fossil fuels its potential as a carbon free alternative depends on the ability to capture the carbon dioxide released during manufacture Sorption enhanced hydrogen production in which CO₂ is removed as it is formed can make a major contribution to achieving this The challenge is to find solid adsorbents with sufficient CO₂ capacity that can work in the right temperature window over repeated adsorption desorption cycles The book presents a highly detailed characterization of the materials together with an accurate measurement of their adsorption properties under dry conditions and in the presence of steam It demonstrates that even small quantities of graphene oxide provide superior thermal stability to hydrotalcites due to their compatible layered structure making them well suited as volume efficient
