and modified ocean currents and the global outlook is bleak. Additionally, the security situation in the Arctic is worsening. After the 2014 Ukraine crisis, the West imposed sanctions on the Russian Federation, which have revived the divisions of the Cold War. The reemergence of these postures is threatening the highly successful Barents Cooperation and other initiatives for peace in the circumpolar North. This book offers new insights and presents arguments for how to mitigate the challenges the Arctic is facing today.

**Sand, Snow, and Stardust** Gretchen Heefner, 2025-05-05. A vivid tour of US military efforts to understand, survive, and command harsh environments worldwide and beyond. Deserts, the Arctic, outer space: these extreme environments are often seen as inhospitable places at the edges of our maps. But from the 1940s through the 1960s, spurred by the diverse and unfamiliar regions the US military had navigated during World War II, the United States defense establishment took a keen interest in these places, dispatching troops to the Aleutian Islands, North Africa, the South Pacific, and beyond. To preserve the country's status as a superpower after the war, to pave runways and build bridges, engineers had to understand and then conquer dunes, permafrost, and even the surface of the moon. *Sand, Snow, and Stardust* explores how the US military generated a new understanding of these environments and attempted to master them, intending to cement America's planetary power. Operating in these regions depended as much on scientific and cultural knowledge as on military expertise and technology. From General George S. Patton learning the hard way that the desert is not always hot to the challenges of constructing a scientific research base under the Arctic ice to the sheer implausibility of modeling Martian environments on Earth, Gretchen Heefner takes us on a wry expedition into the extremes and introduces us to the people who have shaped our insight into these extraordinary environments. Even decades after the first manned space flight plans for human space exploration and extraplanetary colonization are still based on what we know about stark habitats on Earth. An entertaining survey of the relationship between environmental history and military might, *Sand, Snow, and Stardust* also serves as a warning about the further transformation of the planet, whether through desertification, melting ice caps, or attempts to escape it entirely.

**Greenland - The End of the World** Damjan Koncnik, Kevin Kato, 2010-11. Do tupilaks really harbor supernatural powers? Is there more than one way to spell *Ittoqqoortoormiit*? And just why is sleeping in a tent in this icy, rainy land better than a beachfront hotel in Waikiki? These questions are only the tip of the iceberg of mysteries and surprises. Damjan Koncnik uncovers over three expeditions to this island way up there. Chock full of history, humor, and hardship, these tales of an everyday man's adventures in the Far North will stoke the imaginative fires of avid travelers and armchair explorers alike.

**The Shaping of Greenland's Resource Spaces** Mark Nuttall, 2023-08-07. The book examines ideas about the making and shaping of Greenland's society, environment, and resource spaces. It discusses how Greenland's resources have been extracted at different points in its history, shows how acquiring knowledge of subsurface environments has been crucial for matters of securitisation, and explores how the country is being imagined as an emerging frontier with vast mineral reserves. The book delves into the history and contemporary practice of geological exploration and considers the

politics and corporate activities that frame discussion about extractive industries and resource zones. It touches upon resource policies, the nature of social and environmental assessments and permitting processes while the environmental and social effects of extractive industries are considered alongside an assessment of the status of current and planned resource projects. In its exploration of the nature and place of territory and the subterranean in political and economic narratives, the book shows how the making of Greenland has and continues to be bound up with the shaping of resource spaces and with ambitions to extract resources from them. Yet the book shows that plans for extractive industries remain controversial. It concludes by considering the prospects for future development and debates on conservation and Indigenous rights with reflections on how and where Greenland is positioned in the geopolitics of environmental governance and geo security in the Arctic. This book will be of great interest to students and scholars of environmental anthropology, geography, resource management, extractive industries, environmental governance, international relations, geopolitics, Arctic studies, and sustainable development.

**The Inuit World** Pamela Stern, 2021-11-23. The Inuit World is a robust and holistic reference source to contemporary Inuit life from the intimate world of the household to the global stage. Organized around the themes of physical worlds, moral, spiritual, and intellectual worlds, intimate and everyday worlds, and social and political worlds, this book includes ethnographically rich contributions from a range of scholars, including Inuit and other Indigenous authors. The book considers regional social and cultural differences as well as the shared histories and common cultural practices that allow us to recognize Inuit as a single, distinct Indigenous people. The chapters demonstrate both the historical continuity of Inuit culture and the dynamic ways that Inuit people have responded to changing social, environmental, political, and economic conditions. Chapter topics include ancestral landscapes, tourism, and archaeology, resource extraction, and climate change, environmental activism, and women's leadership. This book is an invaluable resource for students and researchers in anthropology, Indigenous studies, and Arctic studies, and those in related fields including geography, history, sociology, political science, and education.
