

MACROECONOMICS

SPARKCHARTS

Macroeconomics is the study of the economy as a whole. It focuses on the behavior of aggregate variables such as GDP, unemployment, and inflation. The primary goal of macroeconomics is to understand the causes and consequences of economic fluctuations and to develop policies to promote economic growth and stability.

The aggregate demand curve shows the total demand for goods and services in an economy. It is downward-sloping and shifts to the right in response to factors such as an increase in the money supply, a decrease in taxes, or an increase in government spending. The aggregate supply curve shows the total supply of goods and services in an economy. It is upward-sloping and shifts to the right in response to factors such as an increase in the labor force or an increase in technology.

The Phillips curve shows the relationship between inflation and unemployment. It is downward-sloping and indicates that as unemployment decreases, inflation increases. The short-run aggregate supply curve shows the relationship between the price level and the quantity of output supplied. It is upward-sloping and indicates that as the price level increases, the quantity of output supplied increases.
