The Tropical Rain Forest Marius Jacobs, 2012-12-06 In recent years tropical forests have received more attention and have been the subject of greater environmental concern than any other kind of vegetation There is an increasing public awareness of the importance of these forests not only as a diminishing source of countless products used by mankind nor for their effects on soil stabilization and climate but as unrivalled sources of what today we call biodiversity Threats to the continued existence of the forests represent threats to tens of thousands of species of organisms both plants and animals It is all the more surprising therefore that there have been no major scientific accounts published in recent years since the classic handbook by Paul W Richards *The Tropical Rain Forest* in 1952 Some excellent popular accounts of tropical rain forests have been published including Paul Richards's *The Life of the Jungle* and Catherine Caulfield's *In the Rainforest and Jungles* edited by Edward Ayensu There have been numerous often conflicting assessments of the rate of conversion of tropical forests to other uses and explanations of the underlying causes and in 1978 UNESCO UNEPI FAO published a massive report *The Tropical Rain Forest* which although full of useful information is highly selective and does not fully survey the enormous diversity of the forests *An Evaluation of POLEX (CIFOR's Forest Policy Experts Listserv)* Michael J. Spilsbury, Nina

Haase, 2005-01-01 Climate Change William James Burroughs, 2001-05-03 *Climate Change a Multidisciplinary Approach* provides an up to date concise and comprehensive presentation of our current knowledge of climate change and its implications for society The book begins by giving a balanced coverage of the physical principles of the global climate its behaviour on all timescales and the evidence for and consequences of past change It then reviews how we measure climate change and the statistical methods for analysing data before exploring its causes and how we can model this behaviour The final sections discuss predictions of future climate change and the economic and political debate surrounding its prevention and mitigation This is a valuable undergraduate textbook for a wide range of courses including meteorology oceanography environmental science earth science geography history agriculture and social science It will also appeal to a wider general audience of readers in search of a better understanding of climate change Economic and Environmental Impact of Free Trade in East and South East Asia Kakali Mukhopadhyay, Paul J. Thomassin, 2009-12-18 In recent years the East and South

East Asian region has witnessed a rapid expansion of regional economic cooperation through bilateral and plurilateral free trade agreements. The current book attempts to comprehensively analyze the economic and environmental impacts of regional economic integration in East and South East Asia to the year 2020. This region has some of the fastest growing economies of the world. A global economic model was used to undertake the analysis. A rare feature of the book is the detailed environmental implications of the Regional Trade Agreements focusing on air, water and waste pollution. Economic integration among the East and South East Asian region has been an important agenda item for the academic and policy communities in recent years. The study provides insight into pursuing a concrete multilateral trade liberalization policy combining ASEAN and other countries in East Asia and throws more light on the on going trade and environment debate. This book will be a good addition to the field of trade and the environment. The academic community, primarily researchers and policy makers and world bodies such as the WTO, ADB and the World Bank will benefit from the book.

Historical Environmental Variation in Conservation and Natural Resource Management John A. Wiens, Gregory D. Hayward, Hugh D. Safford, Catherine Giffen, 2012-09-04. In North America, concepts of Historical Range of Variability are being employed in land management planning for properties of private organizations and multiple government agencies. The National Park Service, U.S. Fish Wildlife Service, Bureau of Land Management, U.S. Forest Service and The Nature Conservancy all include elements of historical ecology in their planning processes. Similar approaches are part of land management and conservation in Europe and Australia. Each of these user groups must struggle with the added complication of rapid climate change, rapid land use change and technical issues in order to employ historical ecology effectively. **Historical Environmental Variation in Conservation and Natural Resource Management** explores the utility of historical ecology in a management and conservation context and the development of concepts related to understanding future ranges of variability. It provides guidance and insights to all those entrusted with managing and conserving natural resources: land use planners, ecologists, fire scientists, natural resource policy makers, conservation biologists, refuge and preserve managers and field practitioners. The book will be particularly timely as science based management is once again emphasized in United States federal land management and as an understanding of the potential effects of climate change becomes more widespread among resource managers. The Future of the World's Forests Jim Douglas, Markku Simula, 2010-09-05 At the landmark 1992 United Nations Conference on Environment and Development Earth Summit solemn resolutions were made both to protect the world's biodiversity and to co operate on managing natural forests in a sustainable and ecologically responsible way If anything given recent developments in issues such as climate change and poverty the problem of protecting and sustaining forests should logically have become more important globally Yet public interest in and development support for forest activities have declined and rates of forest loss remain stubbornly high Why has this happened This book seeks answers to this question It examines the often dysfunctional relationships between various members of the international forest constituency which have so often prevented the formation of consensus It also explores the tendency to pursue technical and politically convenient fixes focused on the internal workings of the forest sector while ignoring the overwhelming influence of external forces on the fate of forests The result all too often has been programs which benefit a few powerful players and fail to provide real solutions The book provides a new examination of and perspective on the international forest policy debate It clarifies the reasons for global forest conflicts and provides insight for future policy development Including examples from both the developed and developing world it provides an invaluable resource for researchers and graduate students in forest policy and international relations as well as a useful reference for policymakers and professionals in the forest sector the development community and conservationists With significant global attention now focused on reducing carbon emissions from deforestation and forest degradation REDD the authors examine the promise and the potential problems that apply to this initiative

Handbook of Biological Control T. W. Fisher, Thomas S. Bellows, L. E. Caltagirone, D. L. Dahlsten, Carl B. Huffaker, G. Gordh, 1999-09-20 For many years the use of chemical agents such as pesticides and herbicides has been effective in controlling the many varieties of pests that infest both agricultural crops and backyard gardens However these pests are gradually becoming resistant to these agents because the agents themselves are acting as selective factors making the pests better and better able to resist and persist As a result the use of biological controlling agents is increasing This book is a comprehensive and authoritative handbook of biological control *Ecosystem Services and Carbon Sequestration in the Biosphere* Rattan Lal, Klaus Lorenz, Reinhard F. Hüttel, Bernd Uwe Schneider, Joachim von Braun, 2013-05-29 Ecological functions and human wellbeing depend on ecosystem services Among the ecosystem services are provisional food feed fuel fiber regulating carbon sequestration waste recycling water cleansing cultural aesthetic recreational spiritual and supporting services soil formation photosynthesis nutrient cycling Many relationships of various degree exist among ecosystem services Thus land use and soil management to enhance biospheric carbon sinks for carbon sequestration requires a comprehensive understanding on the effects on ecosystem services Payments for ecosystem services including carbon pricing must address the relationship between carbon sequestration and ecosystem services to minimize risks of overshoot and promote sustainable use of land based carbon sinks for human wellbeing **Temperate and Boreal Rainforests of the World** Dominick A. DellaSala, 2011 Temperate rainforests are biogeographically unique Compared to their tropical counterparts temperate rainforests are rarer and are found disproportionately along coastlines Because most temperate rainforests are marked by the intersection of marine terrestrial and freshwater systems these rich ecotones are among the most productive regions on Earth Globally temperate rainforests store vast amounts of carbon provide habitat for scores of rare and endemic species with ancient affinities and sustain complex food web dynamics In spite of their global significance however protection levels for these ecosystems are far too low to sustain temperate rainforests under a rapidly changing global climate and ever expanding human footprint Therefore a global synthesis is needed to provide the latest ecological science and call attention to the conservation needs of temperate and boreal rainforests A concerted effort to internationalize the plight of the world s temperate and boreal rainforests is underway around the globe this book offers an essential and heretofore missing tool for that effort DellaSala and his contributors tell a compelling story of the importance of temperate and boreal rainforests that includes some surprises e g South Africa Iran Turkey Japan Russia This volume provides a comprehensive reference from

which to build a collective vision of their future *The Human Impact on the Natural Environment* Andrew Goudie,2000 The book also discusses the development of ideas on global change BOOK JACKET Environmental Security Narottam Gaan,2004 The work is an authentic and comprehensive one on environmental security Some important topics discussed are Environmental security a theoretical quest politics of environment security and problems of widening environmental scarcity of resources global climate change etc Useful for environmentalists researchers
