The Handbook of Information Security for Advanced Neuroprosthetics Matthew E. Gladden, 2017-02-20 How does one ensure information security for a computer that is entangled with the structures and processes of a human brain and for the human mind that is interconnected with

such a device The need to provide information security for neuroprosthetic devices grows more pressing as increasing numbers of people utilize therapeutic technologies such as cochlear implants retinal prostheses robotic prosthetic limbs and deep brain stimulation devices Moreover emerging neuroprosthetic technologies for human enhancement are expected to increasingly transform their human users sensory motor and cognitive capacities in ways that generate new posthumanized sociotechnological realities In this context it is essential not only to ensure the information security of such neuroprostheses themselves but more importantly to ensure the psychological and physical health autonomy and personal identity of the human beings whose cognitive processes are inextricably linked with such devices InfoSec practitioners must not only guard against threats to the confidentiality and integrity of data stored within a neuroprosthetic device s internal memory they must also guard against threats to the confidentiality and integrity of thoughts memories and desires existing within the mind the of the device s human host This second edition of The Handbook of Information Security for Advanced Neuroprosthetics updates the previous edition s comprehensive investigation of these issues from both theoretical and practical perspectives It provides an introduction to the current state of neuroprosthetics and expected future trends in the field along with an introduction to fundamental principles of information security and an analysis of how they must be re envisioned to address the unique challenges posed by advanced neuroprosthetics A two dimensional cognitional security framework is presented whose security goals are designed to protect a device s human host in his or her roles as a sapient metavalitional agent embodied embedded organism and social and economic actor Practical consideration is given to information security responsibilities and roles within an organizational context and to the application of preventive detective and corrective or compensating security controls to neuroprosthetic devices their host device systems and the larger supersystems in which they operate Finally it is shown that while implantable neuroprostheses create new kinds of security vulnerabilities and risks they may also serve to enhance the information security of some types of human hosts such as those experiencing certain neurological conditions
