

PERIODICAL INSPECTION AND MAINTENANCE

INSPECTION AFTER INITIAL 50 HOUR OPERATION

(a) Replacing the engine oil and engine oil filter (1st time)

Exercise caution when handling hot engine oil as it may cause serious burns. After running the engine, let the oil cool until it is just warm before draining and replacing. It is most effective to drain the engine oil while the engine is still warm.

In early period of use, the engine oil gets dirty rapidly because of the initial wear of internal parts. Replace the engine oil earlier.

Engine oil filter should also be replaced when the engine oil is replaced.

Engine oil and engine oil filter replacing procedures are as follows.

Remove the oil filter cap to drain easily while draining the engine oil.

- 1) Prepare a supply of container collecting waste oil.
- 2) Loosen the drain plug using a wrench (customer provided) to drain the engine oil.
- 3) Securely tighten the drain plug after draining the engine oil.
- 4) Turn the engine oil filter counter-clockwise using a filter wrench (customer provided) to remove it.
- 5) Clean the engine oil filter mounting face.
- 6) Moisten the new engine oil filter gasket with the engine oil and install the new engine oil filter manually turning it clockwise until it comes into contact with the mounting surface, and tighten it further to 5/4 of a turn with the filter wrench.

Tightening torque: 15.8-23.0Nm (2.2-3.2 kgfm)

Applicable engine oil filter Part No. CCR-48807111

- 7) Fill with the new engine oil until it reaches the specified level as explained in OPERATION section.
- 8) Warm up the engine by running for 5 minutes while checking any oil leakage.
- 9) Stop the engine after warming up and leave it idling for about 10 minute to recheck the engine oil level with dipstick and replenish the engine oil. If any oil is spilled, wipe it away with a clean cloth.

10) Resume engine oil and filter changes at 250-hour intervals with new Doosan fluids or 500-hour intervals with Doosan-Protect engine fluid and filter.

NOTE: The use of genuine Doosan oil and filters will qualify for extended warranty coverage. Refer to Warranty Section of the manual.

PRQ-FEC Engine Fluid Part No. 50488018 (1 gallon)

CAUTION

Do not overfill the oil pan with engine oil. Be sure to keep the specified level between upper and lower limit on the dipstick.

The location depends on the engine installed on the machine unit.

B. Oil pan	

A. Engine oil filter	B. Tighten
B. Loosen	

(b) Draining of the oil/water separator

Draining Water from Fuel Filter/Water Separator

The fuel filter/water separator is provided to allow water to be drained from the fuel system. Water is heavier than fuel so any water contained in the system will collect in the bottom of the fuel.

The clear level 'D' should be checked on a daily basis and if water is present, it should be drained from the separator.

Place a suitable container under the separator to prevent any spillage inside the machine.

Loosen the drain valve 'E' until water drains from the vent tube.

When all of the water has been evacuated, tighten the drain valve 'E' and follow the 'fuel system air bleeding' procedure.

Fuel System Air Bleeding

The entry of air into the fuel system will cause difficult engine starting or engine malfunction.

When carrying out service procedures such as emptying the fuel tank, draining the filter/water separator, and changing the fuel filter element be sure to bleed air from the fuel system.

To activate the 'automatic air-bleeding system', turn the key switch to the 'ON' position and energize the electromagnetic pump to bleed the air.

Air Bleeding method

When the 'water switch' is set to the 'ON' position to activate the electromagnetic pump, fuel is forced to the fuel valve of each injection pump and then to the shut-off pipe of each injector nozzle, so that any air in the fuel system bleeds off automatically to the fuel tank.

NOTE: Although the fuel system can bleed air automatically when the key switch is in the 'ON' position, air can also be manually bled by use of the primer pump facility in the filter separator assembly.

By unscrewing the plastic primer pump head 'H' and stroking it up and down, any air bubbles in the system will be purged back to the fuel tank. When this has been completed, the pump head must be screwed back into the filter/water separator assembly.

Start the engine and visually check the fuel system for leaks.

Replacing fuel filter

Replace the fuel filter at specified intervals before it is clogged with dust to adversely affect the fuel flow. Also, replace the fuel filter after the engine has fully been cooled.

- 1) Remove the fuel filter using a filter wrench(customer provided). When removing the fuel filter, hold the bottom of the fuel filter with a piece of rag to prevent the fuel oil from dripping. If you spill fuel, wipe with sponge carefully.
- 2) Clean the filter mounting surface and slightly apply fuel oil to the gasket of the new fuel filter.
- 3) Install the new fuel filter manually turning until it comes into contact with the mounting surface, and tighten it further to 1/2 of a turn, using a filter wrench. Tightening torque: 11.8-15.0Nm (1.2-1.6 kgfm)

Applicable fuel filter Part No. CCR-48807108
