Greening Modernism Preservation Sustainability And The Modern Movement:

Greening Modernism Carl Stein, 2010-10-26 *Greening Modernism* addresses the interrelationships between sustainability architectural preservation and the Modern movement and places these issues into historical perspective For the past quarter century mainstream architecture has proceeded on the underlying belief that we have the resources to build whatever and as much as we want and that technology can overcome any problems we create for ourselves through our building activities The serious shortages that now confront us demand a thorough reevaluation of this premise Carl Stein nationally recognized for his contributions to the field of sustainable design connects the impact of individual building design decisions to the global energy and environmental crises He sets out the argument for sustainability inherent in Modern design identifying tenets that are intrinsic to contemporary ecological thinking and he provides the nuts and bolts information to assist practitioners and students of architecture engineering planning and environmentalism in specific building upgrade projects While not a how to handbook *Greening Modernism* provides quantitative data and describes the environmental benefits from the continued use of the vast inventory of modern buildings including reduced demand for energy and other finite resources and reduced need for waste processing *Greening Modernism* explains the relationships between design and technology in the pre petroleum early petroleum and late petroleum eras and goes on to suggest opportunities for architecture in a post petroleum world

The Greening of Architecture Phillip James Tabb, A. Senem Deviren, 2017-03-02 Contemporary architecture and the culture it reflects dependent as it is on fossil fuels has contributed to the cause and necessity of a burgeoning green process that emerged over the past half century This text is the first to offer a comprehensive critical history and analysis of the greening of architecture through accumulative reduction of negative environmental effects caused by buildings urban designs and settlements Describing the progressive development of green architecture from 1960 to 2010 it illustrates how it is ever evolving and ameliorated through alterations in form technology materials and use and it examines different places worldwide that represent a diversity of cultural and climatic contexts The book is divided into seven chapters with an overview of the environmental issues and the nature of green architecture in response to them followed by an historic perspective of the pioneering evolution of green technology and architectural integration over the past five decades and finally providing the intransigent and culturally pervasive current examples within a wide range of geographic territories The greening of architecture is seen as an evolutionary process that is informed by significant world events climate change environmental theories movements in architecture technological innovations and seminal works in architecture and planning throughout each decade over the past fifty years This time period is bounded on one end by the awareness of environmental problems beginning in the 1960 s the influential texts by Rachel Carson E F Schumacher Buckminster Fuller and Steward Brand and the impact of the OPEC Oil Embargo of 1973 and on the other end the pervasiveness of the necessary greening of architecture that includes systemic reforms in architectural and urban design land use planning transportation agriculture

and energy production found in the 2000 s The greening process moves from remediation to holistic models of architecture Geographical landscapes give a global account of the greening process where some examples are parallel and sympathetic and others are in clear contrast to one another with very individuated approaches Certain events like the Rio Summit in 1992 and Kyoto Protocol in 1997 and themes such as the Hannover Principles in 2000 provide a dynamic ideological critique as well as a formal and technical discussion of the embodied and accumulative content of greening principles in architecture

Sustainability Steven A. Moore, 2016-07-04 This second edition of *Pragmatic Sustainability* proposes a pragmatic discursive and pluralistic approach to thinking about sustainability Rather than suggesting a single solution to the problem of how to live sustainably this collection discusses broader approaches to social and environmental change Eight continuing authors and seven new ones adjust their dispositions toward rapidly changing and still unsustainable conditions forging agreements and disagreements on five overlapping themes the Grounds for Sustainability the critique of Technological Culture the need to conceive of Sustainability in Place in Cities finally asking how should we reimagine the fraught relationship between Civil Society Industry and Regulation Editor Steven A Moore asks how a set of ideas now more than a century old remains relevant A partial answer can be found in reconstructing the very modern ideas confronted by those who came to call themselves

Pragmatists at the beginning of the twentieth century evolution ecology and design Moore argues that we have yet to develop dispositions in theory and practice that critically integrate these ideas into sustainable development In sum this new edition provides a fresh and hopeful look at the wicked problems deliberated by almost anyone engaged in adapting to the always changing conditions of the built world **The Innovative Use of Materials in Architecture and Landscape**

Mieg,Heike Oevermann,2014-08-07 The management of industrial heritage sites requires rethinking in the context of urban change and the issue of how to balance protection preservation conservation and

development becomes all the more crucial as industrial heritage sites grow in number. This brings into play new challenges not only through the known conflicts between monument preservation and contemporary architecture but also with the increasing demand for economic urban development by reusing the built heritage of former industrial sites. This book explores the conservation and change of industrial heritage sites in transformation, presenting and examining ten European and Asian case studies. The interdisciplinary approach of the book connects a diversity of rationales and discourses including monument protection, World Heritage conventions, urban regeneration, urban planning and design, architecture and politics. This is the first book to deepen the understanding of industrial heritage site management as a networked multi-dimensional task involving diverse social agents and societal discourses.

Thermodynamic Interactions Javier Garcia-German, 2017-07-01 An Exploration into Material, Physiological, and Territorial Atmospheres. Energy and sustainability is a complex topic that needs to address simultaneously core disciplinary values and ideas that come from other fields of knowledge. The interconnection between the environment and its climate, its built structures, and the human body requires overlying architecture with other disciplines such as meteorology, thermodynamics, or physiology to engage them in a holistic way. The book is structured in three blocks: Territorial Atmospheres, Material Atmospheres, and Physiological Atmospheres, which present three distinct and successive realms at which thermodynamic exchanges are taking place. Territorial Atmospheres deals with the thermodynamic interaction between the environment and its built structures. Material Atmospheres focuses on the interaction between a building and the climate it generates. And lastly, Physiological Atmospheres centers on the interaction between indoor ambient and the physiological and psychological effects on human beings. Each of the blocks has a co-editor, Silvia Benedito.

The worldwide use of building envelopes in steel and glass is one of the characteristic features of modern architecture. Many of these pre and post war buildings are now suffering severe defects in the building fabric which necessitate measures to preserve the buildings. In this endeavor aspects of architectural design, building physics and the preservation of historic buildings play a key role. Using a selection of 20 iconic buildings in Europe and the USA, the book documents the current technological status of the three most common strategies used today: restoration, rehabilitation and replacement. The buildings include Fallingwater House by Frank Lloyd Wright, Farnsworth House by Ludwig Mies van der Rohe, Fagus Factory and Bauhaus Building by Walter Gropius. The State of Conservation Joshua Nygren, 2025-01-06. In the twentieth century, natural resource conservation emerged as a vital force in US politics, laying the groundwork for present-day sustainability. Merging environmental, agricultural and political history, Joshua Nygren examines the political economy and ecology of agricultural conservation through the lens of the conservation industrial complex. This evolving public-private network, which united the US Department of Agriculture, Congress, local and national organizations and the agricultural industry, guided soil and water conservation in rural America for much of the century. Contrary to the classic tales of US environmental politics and the rise and fall of the New Deal Order, this book emphasizes continuity. Nygren demonstrates how the conservation policies, programs and partnerships of the 1930s and 1940s persisted through the age of environmentalism and how their defining traits anticipated those typically associated with late twentieth-century political culture. The conservation industrial complex promoted a development-oriented brand of conservation that aided the rise of large-scale capital-intensive agriculture which continues today. It also reshaped the physical and political landscapes of the country, leading to impressive conservation victories and spectacular failures by privileging some environments, degrading others and intensifying farm depopulation. In the name of environmental protection, agricultural conservation made rural America less equal.

California Women and Politics Robert W. Cherny, 2011. An edited volume exploring the role women played in California politics in the late nineteenth and early twentieth centuries. Contemporary Urban Landscapes of the Middle East Mohammad Gharipour, 2016-03-17. The Middle East is well known for its historic gardens that have developed over more than two millennia. The role of urban landscape projects in Middle Eastern cities has grown in prominence with a gradual shift in emphasis from gardens for the private sphere to an increasingly public function. The contemporary landscape projects, either designed as public plazas or public parks, have played a significant role in transferring the modern Middle Eastern cities to a new era and also in transforming to a newly shaped social culture in which the public has a voice. This book considers what ties these projects to their historical context and what regional and local elements and concepts have been used in their design. The Country in the City Richard A.
