Plaisance, Thomas A.C. Reydon, 2011-10-05 This volume provides a broad overview of issues in the philosophy of behavioral biology covering four main themes genetic developmental evolutionary and neurobiological explanations of behavior It is both interdisciplinary and empirically informed in its approach addressing philosophical issues that arise from recent scientific findings in biological research on human and non human animal behavior Accordingly it includes papers by professional philosophers and philosophers of science as well as practicing scientists Much of the work in this volume builds on presentations given at the international conference Biological Explanations of Behavior Philosophical Perspectives held in 2008 at the Leibniz University of Hannover in Germany The volume is intended to be of interest to a broad range of audiences which includes philosophers e.g. philosophers of mind philosophers of biology and metaethicists as well as practicing scientists such as biologists or psychologists whose interests relate to biological explanations of behavior *"The"*

Health research in developing countries has many facets On one side malaria and AIDS as main causes of morbidity and mortality are a focus for clinical and epidemiological studies On the other side the need for improving the health care system in general cannot be overestimated The book offers a survey of current and important topics of health research in developing countries Special emphasis is placed to show that cooperation of different health research areas is of highest importance in future In addition the CRSN Burkina Faso University of Heidelberg collaboration is given as a model that allows high class research in remote areas of any developing country An absolute must for all who are working in clinical epidemiological and health systems research for and in developing countries **"The" Medical Times and Gazette**, 1862 *Human Lactation 2* M. Hamosh, A.S. Goldman, 2012-12-06 The International Workshop on human lactation dedicated specifically to the topic of Maternal and Environmental Effects on Lactation represents the recent progress of research in human lactation Only four years ago it was clear that we do not yet have sensitive research techniques specifically adapted to the study of human milk This need was addressed by an NIH convened workshop in 1982 the consensus being that appropriate methods have to be developed for the study of the composition of human milk The progress in the development of these techniques

was the subject of the second workshop on human lactation dedicated specifically to Milk Components and Methodologies. The workshop was held in Colorado in 1984 and resulted in the publication of the first volume in the series of Human Lactation. At the Colorado meeting it was readily apparent that considerable progress has been made in the development of sensitive techniques able to quantitate the bioactive components of human milk: enzymes, growth factors, immuno-protective agents as well as the macro, micro and trace elements. At the Colorado workshop it became clear that these workshops greatly benefit the research of human lactation by enhancing communication and collaboration among the investigators in the field. As a result it was decided to have a future workshop about a year later on the topic of Maternal Environmental Effects on Human Lactation and I was charged with chairing it.

Schiffman, Margie L. Kiter Edwards, 2007-08. The approach of the year 2000 has made the study of apocalyptic movements trendy. But groups anticipating the end of the world will continue to predict Armageddon even after the calendar clicks to triple 0s. A Doomsday Reader brings together pronouncements, edicts and scriptures written by prominent apocalyptic movements from a wide range of traditions and ideologies to offer an exceptional look into their belief systems. Focused on attaining paradise, millenarianism often anticipates great cosmic change. While most think of religious belief as motivating such fervor, Daniels' comparative approach encompasses secular movements such as environmentalism and the Montana Freemen and argues that such groups are often more political than religious in nature. The book includes documents from groups such as the Branch Davidians, the Order of the Solar Temple, Heaven's Gate and white supremacists. Each document is preceded by a substantive introduction placing the movement and its beliefs in context. This important overview of contemporary politics of the End will remain a valuable resource long after the year 2000 has come and gone.
