**Conference on Medical and Biological Engineering and Computing 2010** Nicolas Pallikarakis, Panagiotis D.  
Bamidis, 2010-05-28 Over the past three decades the exploding number of new technologies and applications introduced in  
medical practice often powered by advances in biosignal processing and biomedical imaging created an amazing account of  
new possibilities for diagnosis and therapy but also raised major questions of appropriateness and safety The accelerated  
development in this field alongside with the promotion of electronic health care solutions is often on the basis of an  
uncontrolled diffusion and use of medical technology The emergence and use of medical devices is multiplied rapidly and  
today there exist more than one million different products available on the world market Despite the fact that the rising cost  
of health care partly resulting from the new emerging technological applications forms the most serious and urgent problem  
for many governments today another important concern is that of patient safety and user protection issues that should never  
be compromised and expelled from the Biomedical Engineering research practice agenda     **PROP - Healthcare**

**Personal Medical Information** Ross Anderson, 2012-12-06 In the last few years the protection of computerised medical  
records and of other personal health information has become the subject of both technical research and political dispute in a

number of countries In Britain the issue arose initially as an argument between the British Medical Association and the Department of Health over whether encryption should be used in a new medical network In Germany the focus was the issue to all patients of a smartcard to hold insurance details and facilitate payment while in the USA the debate has been whether federal law should preempt state regulation of computerised medical records and if so what technical and legal protection should be afforded the patient Whatever the origin and evolution of this debate in specific countries it has become clear that policy and technical matters are closely intertwined What does computer security mean in the medical context What are we trying to do What are the threats that we are trying to forestall What costs might reasonably be incurred To what extent is the existing technology largely developed to meet military and banking requirements of use And perhaps hardest of all what is the right balance between technical and legal controls As the debate spread it became clear that there was little serious contact between the people who could state the requirements clinical professionals medical ethicists and patients and the people who could explore how to meet
