Understanding Information Retrieval Systems Marcia J. Bates, 2011-12-20 In order to be effective for their users information retrieval IR systems should be adapted to the specific needs of particular environments The huge and growing array of types of information retrieval systems in use today is on display in *Understanding Information Retrieval Systems Management Types and Standards* which addresses over 20 types of IR systems These various system types in turn present both technical and management challenges which are also addressed in this volume In order to be interoperable in a networked environment IR systems must be able to use various types of technical standards a number of which are described in this book often by their original developers The book covers the full context of operational IR systems addressing not only the systems themselves but also human user search behaviors user centered design and management and policy issues In addition to theory and practice of IR system design the book covers Web standards and protocols the Semantic Web XML information retrieval Web social mining search engine optimization specialized museum and library online access records compliance and risk management information storage technology geographic information systems and data transmission protocols Emphasis is given to information systems that operate on relatively unstructured data such as text images and music The book is organized into four parts Part I supplies a broad level introduction to information systems and information retrieval systems Part II examines key management issues and elaborates on the decision process around likely information system solutions Part III illustrates the range of information retrieval systems in use today discussing the technical operational and administrative issues for each type Part IV discusses the most important organizational and technical standards needed for successful information retrieval This volume brings together authoritative articles on the different types of information systems and how to manage real world demands such as digital asset management network management digital content licensing data quality and information system failures It explains how to design systems to address human characteristics and considers key policy and ethical issues such as piracy and preservation Focusing on web based systems the chapters in this book provide an excellent starting point for developing and managing your own IR systems
