## **Inland Flood Hazards Human Riparian And Aquatic Communities:**

*Inland Flood Hazards* Ellen E. Wohl, 2000-07-03 This edited volume was originally published in 2000 and presents a comprehensive interdisciplinary review of issues related to inland flood hazards. It addresses physical controls on flooding, flood processes and effects, and responses to flooding from the perspective of human aquatic and riparian communities. Individual chapter authors are recognized experts in their fields who draw on examples and case studies of inland flood hazards from around the world. This volume is unusual among treatments of flood hazards in that it addresses how the non occurrence of floods in association with flow regulation and other human manipulation of river systems may create hazards for aquatic and riparian communities. This book will be a valuable resource for everyone associated with inland flood hazards: professionals in government and industry and researchers and graduate students in civil engineering, geography, geology, hydrology, hydraulics, and ecology.

*Geographic Information Science and Mountain Geomorphology* Michael Bishop, John F. Schroder, 2004-06-30 From the reviews: Bishop and Schroder both Univ of Nebraska at Omaha have brought together an impressive group of practitioners in the relatively new application of geographic information science to mountain geomorphology. In doing so they have produced valuable first overall coverage of a high tech approach to mountain three dimensional research. More than 40 contributing authors discuss a wide range of related aspects. The book is well bound and well produced; each chapter provides an extensive source of references. The numerous line drawings are clearly reproduced, although the mediocre quality of photographic reproduction limits the value of air photographs and satellite images. As is characteristic of many edited collections, there is some variation in chapter quality. Some of the writing is so dense that it requires minute concentration; one chapter, for instance, has 14 pages of references from a total of 43 pages. Nevertheless, this is a vital compendium for a rapidly expanding field of research. Summing Up: Recommended. Upper division undergraduates through professionals. J D Ives Choice March 2005

*Floods of the Tiber in Ancient Rome* Gregory S. Aldrete, 2007-03-05 A study of the impact of flooding on the ancient city during the classical period. While the remains of its massive aqueducts serve as tangible reminders of Rome's efforts to control its supply of drinking water, there are scant physical reminders that other waters sometimes raged out of control. In fact, floods were simply a part of life in ancient Rome, where proximity to the Tiber left a substantial part of the city vulnerable to the river's occasional transgressions. Here, in the first book-length treatment of the impact of floods on an ancient city, Gregory S. Aldrete draws upon a diverse range of scientific and cultural data to develop a rich and detailed account of flooding in Rome throughout the classical period. Aldrete explores in detail the overflowing river's destructive effects, drawing from ancient and modern written records and literary accounts, analyses of the topography and hydrology of the Tiber drainage basin, visible evidence on surviving structures, and the known engineering methods devised to limit the reach of rising water. He discusses the strategies the Romans employed to alleviate or prevent flooding, their social and religious attitudes toward floods, and how the threat of inundation influenced the

development of the city's physical and economic landscapes. **Floods of the Tiber in Ancient Rome** is that rare thing in scholarship: a work that genuinely fills a gap in the scholarly literature. Professor Aldrete has brilliantly illuminated an aspect of ancient Rome that was ever present to the city's inhabitants but almost invisible to modern historians. Stanley Burstein, history teacher, raises important questions about the effects of flooding of the Tiber on the city of ancient Rome and its inhabitants and explores why Romans did not take more sweeping steps to reduce if not eliminate the dangers of urban flooding. There is no comparable book-length study of this topic, so this work fills a real need. It will be of interest not only to students of ancient history but to hydrologists and students of urban studies as well. Certainly it will give us classicists much to think about in our assessment of urban life in ancient Rome. Harry B. Evans, Fordham University, author of *Aqueduct Hunting in the Seventeenth Century*. **ICDSME 2019** Lariyah Mohd Sidek, Gasim Hayder Ahmed Salih, Mohd Hariffin Boosroh, 2019-12-02. This book presents peer-reviewed articles from the 1st International Conference on Dam Safety Management and Engineering ICDSME 2019, organized by the Malaysian National Committee on Large Dams MYCOLD Tenaga Nasional Berhad TNB, Department of Irrigation and Drainage DID, and Universiti Tenaga Nasional UNITEN. With the theme 'resilient dams for resilient communities', the conference highlighted the latest developments in the area and provided a platform for researchers and professionals to exchange ideas and to address dam safety and engineering issues with the environment in mind. The topics covered included but were not limited to best practices in dam safety, reservoir management, dam health monitoring, risk assessment, emergency management, and sustainable dams. **The Quaternary Period in the United States** A.R. Gillespie, S.C. Porter, B.F. Atwater, 2003-12-17. This book reviews advances in understanding of the past ca. two million years of Earth history: the Quaternary Period in the United States. It begins with sections on ice and water as glaciers, permafrost, oceans, rivers, lakes, and aquifers. Six chapters are devoted to the high-latitude Pleistocene ice sheets, to mountain glaciations of the western United States, and to permafrost studies. Other chapters discuss ice-age lakes, caves, sea-level fluctuations, and riverine landscapes. With a chapter on landscape evolution models, the book turns to essays on geologic processes. Two chapters discuss soils and their responses to climate and wind-blown sediments. Two more describe volcanoes and earthquakes and the use of Quaternary geology to understand the hazards they pose. The next part of the book is on plants and animals. Five chapters consider the Quaternary history of vegetation in the United States. Other chapters treat forcing functions and vegetation response at different spatial and temporal scales, the role of fire as a catalyst of vegetation change during rapid climate shifts, and the use of tree rings in inferring age and past hydroclimatic conditions. Three chapters address vertebrate paleontology and the extinctions of large mammals at the end of the last glaciation, beetle assemblages, and the inferences they permit about past conditions and the peopling of North America. A final chapter addresses the numerical modeling of Quaternary climates and the role paleoclimatic studies and climatic modeling has in predicting future response of the Earth's climate system to the changes we have wrought. **Gravel Bed Rivers 6** H. *Seek Higher Ground* Tim Palmer,2024-04-02 Pairing in

depth journalism with historical perspectives this book makes a compelling case for a natural solution to the growing problem of flooding With *Seek Higher Ground* environmental writer and former land use planner Tim Palmer explores the legacy of flooding in America taking a fresh look at the emerging climatic economic and ecological realities of our rivers and communities Global warming is forecast to sharply intensify flooding and this book urges that we reduce future damage in the most effective efficient and equitable ways possible Through historical narrative rigorous reporting and decades of vivid personal experience Palmer details how our society's approach to flood control has been infamously inadequate and chronically counterproductive He builds a powerful argument for both the protection of floodplain open space and for programs that help people voluntarily relocate their homes away from high water hazards Only by recognizing the indomitable forces of nature and adapting to them can we thrive in the challenging climate to come

Sharpe,2007-08-10 Early one May morning in 1874 in the hills above Williamsburg Massachusetts a reservoir dam suddenly burst sending an avalanche of water down a narrow river valley lined with factories and farms In just thirty minutes the Mill River flood left 139 people dead and 740 homeless and a nation wondering how this terrible calamity had happened In this compelling tale of a man made disaster peopled with everyday heroes and arrogant scoundrels Elizabeth Sharpe opens a rare

window into industry and village life in nineteenth century New England a time when dam failures and other industrial accidents were widespread and laws favored factory owners rather than factory workers In the Mill Valley the townsfolk depended upon generally benevolent patriarchs who assured them that the dam was safe when most people could see that it was not The story of the Mill River flood is the story of those townsfolk of George Cheney the dam keeper whose repeated warnings about leaks in the dam had been ignored by the mill owners of his wife Elizabeth who watched in disbelief as the dam burst open from the bottom of Isabella Hayden the mother who saw her young son swept away in the river's torrent and of Fred Howard a box maker who spent the days after the flood searching for bodies burying friends and waiting to see if the button factory he relied upon for his livelihood would be rebuilt It is also the story of the well meaning but overconfident businessmen who built the dam of Onslow Spelman the manufacturer who dismissed the dam keeper's flood warning irrationally insisting that the dam could not break of Lucius Fenn and Joel Bassett the engineer and contractor whose roles in the construction of the dam would be questioned during the public inquest into the causes of the flood of William Skinner the factory owner who struggled to decide whether or not to rebuild his silk factory in the village that bore his name and of many others The flood highlighted class divisions between worker and owner as well as the disorganized state of professional engineering then still in its infancy As the flood exposed the dangers of allowing mill owners who were not trained engineers to design their own dam legislation to regulate the building of reservoir dams in Massachusetts was enacted for the first time Engineers politicians and business owners battled over control of the reform measures to prevent similar tragedies yet saw them continually repeated In the Shadow of the Dam is the story of an event that reshaped a society Told through the eyes of villagers like Collins Graves lauded as a hero for his desperate ride through the valley to warn people of the impending flood and industrialists like Joel Hayden Jr entrusted with the responsibility of disaster relief despite his culpability in failing to maintain the leaking dam In the Shadow of the Dam is a history of our uneasy relationship with industrial progress and a riveting narrative of a tragic disaster in small town Massachusetts **Himalayan Perceptions** Jack Ives, 2004-08-05

Riparian Zone Functioning and Strategies for Management, 2002-09-10 The Clean Water Act CWA requires that wetlands be protected from degradation because of their important ecological functions including maintenance of high water quality and provision of fish and wildlife habitat However this protection generally does not encompass riparian areas the lands bordering rivers and lakes even though they often provide the same functions as wetlands Growing recognition of the similarities in wetland and riparian area functioning and the differences in their legal protection led the NRC in 1999 to undertake a study of riparian areas which has culminated in Riparian Areas Functioning and Strategies for Management The report is intended to heighten awareness of riparian areas commensurate with their ecological and societal values The primary conclusion is that because riparian areas perform a disproportionate number of biological and physical functions on a unit area basis restoration of riparian functions along America's waterbodies should be a national goal
