Hurley,2012-12-06 Baruch S Blumberg NASA Astrobiology Institute Ames Research Center Moffett Field CA USA Scientific research is one of the major human enterprises Many governments are convinced that research and its products provide the means to enrich an economic life that is no longer sustained by traditional manufacturing and service industries The public has a high expectation of medical research and many are convinced that with the expenditure of sufficient money all human diseases can be conquered they look forward to a long and disease free life There is also a great interest in many sectors of society to understand nature not only in order to control it or learn how best to cope with its uncertainties but to accumulate knowledge for its own sake Finally scientific research contributes significantly to the intellectual stores of humanity and provides an important process to explore the most profound questions of life Modern science is rarely a solitary occupation It requires heavy investments in equipment supplies buildings and field capabilities Scientists need a band of fellow explorers with whom to share the adventure discuss experiments and results and perhaps most importantly enable the testing and retesting of their hypotheses by themselves and by others This was certainly the case in my own research which led eventually to the discovery of the Hepatitis B virus and later to the vaccine for it Scientific training is very specialized whereas the solutions to problems transcend narrow disciplinary borders The Cambridge Handbook of Workplace Affect Liu-Qin Yang,Russell Cropanzano,Catherine S. Bessant, Tim Venables, 2010-01-01 This book illustrates that although innovation has always mattered in economic development, simply increasing expenditure in creating knowledge may not be the answer. We need to look at the whole system through which such knowledge translates to value creation. The contributors explore the implications of the changing twenty-first century context of networked, global and increasingly open innovation, a world in which knowledge flows become as important as

knowledge creation In so doing they address four key questions what is the context within which innovation occurs in the UK How do new firms form on the basis of knowledge and its deployment How do established firms access and use knowledge to improve their current activities and generate new directions What technical and organizational infrastructures enable these activities Drawing out lessons for future research this book will be of great interest to academics concerned with science and innovation policy and its implementation Managers and policy makers involved in innovation and technology strategy and with developing responses to new challenges such as open innovation will also find much to interest them within this book
