

DESCRIPTION AND OPERATION

Chassis lifting

This operation is allowed at a speed below 15 Km/h; as soon as this speed is exceeded, automatic chassis leveling is actuated.

Proceed as follow to lift the chassis:

- Press chassis lifting push-button and keep it pressed to enable the relay to close the switch and receive a 5A supply. Now, the control unit commands the relay to start the compressor (6) electrical motor (2). Air is then aspirated through the filter (3), compressed and delivered into the system via the one-way valve and the drying filter (7). Simultaneously, the control unit starts solenoid valves "4" and "5" so that the compressed air is supplied to the suspension air springs to lift the chassis.

During the entire operation, the red warning lamp on the dashboard panel shall flash to inform the driver that the chassis is off trim.

The warning lamp shall keep flashing until the chassis is off normal trim.

Chassis lowering is stopped as the push-button is released while the chassis level reached is maintained.

The maximum height is set by level sensors according to the calibration data memorized in the electronic control unit.

Maximum lifting actuation time is 2 minutes to prevent preheats that could damage the electro compressor.
