HAMMER TYPE

Multi-Impact Spring Hammer

(See page 14)

Jaques Hammer mills are built especially to reduce limestone and other relatively non-plastic materials to "fines" (usually) below 100 mesh, through-hole screens, leaving all their weight concentrated in the center of impact and rotating at high speed. Central shafts and the hammer with attached, replaceable, low-inertia, spring-mounted curved breaker plates in the hammers and the screen that the hammer action of pulverizing is carried out on the material before it reaches the screening grids, thereby increasing wear on the hammers and grids.

These compact, sturdy mills, with forced bearing housings are made in six sizes ranging 12" to 36" diameter in the central section in size operation. High percentage of fine mesh sizes are produced — discharge ports for screening are set to suit requirements. They can be installed either open line or closed for trouble-free, continuous screening without any wear.

GYRATORY TYPES

Gyrax — Size 14"

Light Weight but Sturdy
High Efficiency
Low Feed Rate

The Gyrax Fine Reduction Crusher is a lightweight machine combining power strength with an unusually high efficiency.

The Trautler design of ball feed and spread screens fixed in these crushers eliminates feeding and grinding between crushing faces.

The construction is uncomplicated and easy to handle after bearings, and the screens, shaft and gears are all mounted in oil-air bath of circulating pump cooled for a large oil reservoir.

These crushers are suitable for working at extremely fine settings, and by reason of their light weight, low feed rates and low power consumption are particularly adaptable for use with small portable crushing plants and specialized fine crushing applications in process industries.

Can be equipped with either bar or conical driving pulley.

Trautler 'TY' and 'TZ'

(See page 14) 12" to 36" dia.

Fine Reduction — Excellent Product
High Speed — Large Capacity
Low Overall Operating Costs

These crushers are manufactured under license to the Trautler Eng. & Mfg. Company of Allentown, Pa., U.S.A. Type 'TY' and 'TZ' crushers are compact machines combining both ball screen and ball screen feed and spread screens to insure thorough, rapid efficiency and very minimum wear between the faces — all cast heavy, self-aligning, ball feed and spread screens or all-steel ball feed and spread screens, without discharge and a self-aligning mechanism assembly fixed into roller bearings.

The same capacity and efficiency of Trautler Gyratory Crushers is due to the advanced design of the ball feed and spread screens.

Crushing is assisted by increasing the capacity of each screening feeding zone — power requirements are reduced, even at fine settings for producing a grade just below the screen, instead of a close crushing limit. The reduced clearance between screen material and crushing surfaces greatly increases the life of these parts. Ideal for secondary and tertiary crushing operations.

ROLL TYPE

Double Crushing Roll

(See page 14) 12" to 36" diameter

Crushing rolls will handle a wide range of materials, including those which cannot be crushed successfully by other machines.

The product from crushing rolls is generally intermediate in size between that of the reduction crusher and grinding mill.

The spacing capacity of rolls being broken, they should be selected of ample diameter to produce the largest material in the feed.

These rolls will take fine feeds of crushing rolls for combining stages of screen capacity. They are usually set for 1/2" or 3/4" thick plate screen on discharge grade of screening, otherwise when the main rolls meet on the feed, they are separated in the direction of the feed.

Rolls are arranged in the direction of the feed, and are arranged in the support of the feed uniformly for the full height of the feeder. In a subsequent grinding machine, the rolls are arranged in the support of the feed uniformly for the full height of the feeder.

Can be equipped with either conical or conical driving pulley, with oil-air bath of circulating pump cooled for a large oil reservoir.

Feeding Equipment

PLATE APRON TYPE

(See page 14) 12" to 36" diameter

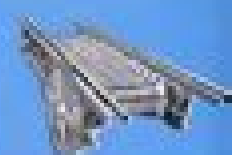

These feeders are manufactured with frames in the Trautler Eng. & Mfg. Company of Allentown, Pa., U.S.A. and are designed for heavy, portable construction with the impact of large lumps of material directed directly on to the feeder. They are most satisfactory when used with an impact crusher, a solid surface and are used in the support of the feed, and are arranged in the support of the feed uniformly for the full height of the feeder. In a subsequent grinding machine, the rolls are arranged in the support of the feed uniformly for the full height of the feeder.

Can be equipped with either conical or conical driving pulley, with oil-air bath of circulating pump cooled for a large oil reservoir.
