Gps Declassified Richard D Easton:

GPS Declassified Richard D. Easton, Project Muse, 2013 GPS Declassified examines the development of GPS from its secret Cold War military roots to its emergence as a worldwide consumer industry Drawing on previously unexplored documents the authors examine how military rivalries influenced the creation of GPS and shaped public perceptions about its origin Since the United States first program to launch a satellite in the late 1950s the nation has pursued dual paths into space one military and secret the other scientific and public Among the many commercial spinoffs this approach has produced GPS arguably boasts the greatest impact on our

After the Map William Rankin, 2016-07-01 For most of the twentieth century maps were indispensable They were how governments understood managed and defended their territory and during the two world wars they were produced by the hundreds of millions Cartographers and journalists predicted the dawning of a map minded age where increasingly state of the art maps would become everyday tools By the century s end however there had been decisive shift in mapping practices as the dominant methods of land surveying and print publication were increasingly displaced by electronic navigation systems In After the Map William Rankin argues that although this shift did not render traditional maps obsolete it did radically change our experience of geographic knowledge from the God s eye view of the map to the embedded subjectivity of GPS Likewise older concerns with geographic truth and objectivity have been upstaged by a new emphasis on simplicity reliability and convenience After the Map shows how this change in geographic perspective is ultimately a transformation of the nature of territory both social and political

Privatizing Peace Wendy N. Whitman Cobb, 2020-06-15 This book explores the privatization of space and its global impact on the future of commerce peace and conflict As space becomes more congested contested and competitive in the government and the private arenas the talk around space research moves past NASA s monopoly on academic and cultural imaginations to discuss how Elon Musk s SpaceX and Jeff Bezos Blue Origin is making space cool again This volume addresses the new rhetoric of space race and weaponization with a focus on how the costs of potential conflict in space would discourage open conflict and enable global cooperation It highlights the increasing dependence of the global economy on space research its democratization plunging costs of access and growing economic potential of space based assets Thoughtful nuanced well documented this book is a must read for scholars and researchers of science and technology studies space studies political studies sociology environmental studies and political economy It will also be of much interest to policymakers bureaucrats think tanks as well as the interested general reader looking for fresh perspectives on the future of space

GPS Paul E. Ceruzzi, 2018-11-06 A concise history of GPS from its military origins to its commercial applications and ubiquity in everyday life GPS is ubiquitous in everyday life GPS mapping is standard equipment in many new cars and geolocation services are embedded in smart phones GPS makes Uber and Lyft possible driverless cars won t be able to drive without it In this volume in the MIT Press Essential Knowledge series Paul Ceruzzi offers a concise history of GPS explaining how a once obscure

space technology became an invisible piece of our infrastructure as essential to modern life as electric power or clean water. GPS relays precise time and positioning information from orbiting satellites to receivers on the ground, at sea, and in the air. It operates worldwide and its basic signals are free, although private companies can commodify the data provided. Ceruzzi recounts the origins of GPS and its predecessor technologies, including early aircraft navigation systems and satellites. He describes the invention of GPS as a space technology in the post-Apollo pre-Space Shuttle years and its first military and commercial uses. Ceruzzi explains how the convergence of three major technological developments—the microprocessor, the Internet, and cellular telephony—enabled the development and application of GPS technology. Recognizing the importance of satellite positioning systems in a shifting geopolitical landscape and perhaps doubting U.S. assurances of perpetual GPS availability, other countries are now building or have already developed their own systems, and Ceruzzi reports on these efforts in the European Union, Russia, India, China, and Japan.

Pinpoint: How GPS is Changing Technology, Culture, and Our Minds Greg Milner, 2016-05-03 One of the most mesmerizing and exhilarating yet alarming modern technology books, an extraordinary tale. Gillian Tett, *Financial Times*. Pinpoint tells the fascinating story of a hidden system that touches nearly every aspect of modern life. Tracking the development of GPS from its origins as a bomb guidance system to its present ubiquity, Greg Milner examines the technology's double-edged effect on the way we live, work, and travel. Savvy and original, this sweeping scientific history offers startling insight into how humans understand their place in the world. [The Age of Interconnection](#) Jonathan Sperber, 2023 A monumental and accessible global history of the second half of the twentieth century, from the end of World War Two to the terrorist attack on the Twin Towers, offering readers the most complete portrait of the age available. [Militarizing Outer Space](#) Alexander C.T. Geppert, Daniel Brandau, Tilmann Siebeneichner, 2020-12-02 Militarizing Outer Space explores the dystopian and destructive dimensions of the Space Age and challenges conventional narratives of a bipolar Cold War rivalry. Concentrating on weapons, warfare, and violence, this provocative volume examines real and imagined endeavors of arming the skies and conquering the heavens. The third and final volume in the groundbreaking European Astroculture trilogy, Militarizing Outer Space zooms in on the interplay between security, technopolitics, and knowledge from the 1920s through the 1980s. Often hailed as the site of heavenly utopias and otherworldly salvation, outer space transformed from a promised sanctuary to a present threat where the battles of the future were to be waged. Astroculture proved instrumental in fathoming forms and functions of warfare's futures, past both on earth and in space. The allure of dominating outer space, the book shows, was neither limited to the early twentieth century nor to current American space force rhetoric.

Spaceflight Michael J. Neufeld, 2018-10-16 A concise history of spaceflight from military rocketry through Sputnik, Apollo, robots in space, space culture, and human spaceflight today. Spaceflight is one of the greatest human achievements of the twentieth century. The Soviets launched Sputnik, the first satellite, in 1957; less than twelve years later, the American Apollo astronauts landed on the Moon. In this volume of the MIT

Press Essential Knowledge series Michael Neufeld offers a concise history of spaceflight mapping the full spectrum of activities that humans have developed in space Neufeld explains that the space program should not be equated only with human spaceflight Since the 1960s unmanned military and commercial spacecraft have been orbiting near the Earth and robotic deep space explorers have sent back stunning images of faraway planets Neufeld begins with the origins of space ideas and the discovery that rocketry could be used for spaceflight He then discusses the Soviet U S Cold War space race and reminds us that NASA resisted adding female astronauts even after the Soviets sent the first female cosmonaut into orbit He analyzes the two rationales for the Apollo program prestige and scientific discovery this last something of an afterthought He describes the internationalization and privatization of human spaceflight after the Cold War the cultural influence of space science fiction including Star Trek and Star Wars space tourism for the ultra rich and the popular desire to go into space Whether we become a multiplanet species as some predict or continue to call Earth home this book offers a useful primer

The Rise of the Commercial Space Industry Brian C. Odom, 2024-09-13 This collection explores the evolution of the commercial space industry from the beginning of the space age through the early twenty first century Today the space industry is taking on an increased leadership and innovation role in both space access and exploration The growth of commercial space over the past decades offers a potential new paradigm for space exploration one in which industry transitions from supplier to partner However many questions remain This book seeks to bring to light these questions which span from the most seemingly consequential how will humanity explore the Moon and Mars to the most basic what is commercial space To further develop the historical context of commercial space and thereby better inform decision making at NASA in the future this volume examines a broad range of questions related to the history of commercial space operations including but not limited to how has the concept of commercial space evolved in different fields and disciplines What have been the major events and milestones in the emergence and evolution of commercial space activities in the USA and internationally How has the US Government assisted or impeded the emergence and evolution of commercial space activities Providing contributions from a range of different disciplines and backgrounds the authors of this volume offer valuable insights for scholars researching the history of space and space policy as well as decision makers working at NASA or within the wider space industry

Atomic Bill Vincent Kiernan, 2022-11-15 In Atomic Bill Vincent Kiernan examines the fraught career of New York Times science journalist William L Laurence and shows his professional and personal lives to be a cautionary tale of dangerous proximity to power Laurence was fascinated with atomic science and its militarization When the Manhattan Project drew near to perfecting the atomic bomb he was recruited to write much of the government's press materials that were distributed on the day that Hiroshima was obliterated That instantly crowned Laurence as one of the leading journalistic experts on the atomic bomb As the Cold War dawned some assessed Laurence as a propagandist defending the militarization of atomic energy For others he was a skilled science communicator who provided the public with

a deep understanding of the atomic bomb Laurence leveraged his perch at the Times to engage in paid speechmaking book writing filmmaking and radio broadcasting His work for the Times declined in quality even as his relationships with people in power grew closer and more lucrative Atomic Bill reveals extraordinary ethical lapses by Laurence such as a cheating scandal at Harvard University and plagiarizing from press releases about atomic bomb tests in the Pacific In 1963 a conflict of interest related to the 1964 World's Fair in New York City led to his forced retirement from the Times Kiernan shows Laurence to have set the trend common among today's journalists of science and technology to prioritize gee whiz coverage of discoveries That approach in which Laurence served the interests of governmental official and scientists recommends a full revision of our understanding of the dawn of the atomic era *Technology and American Society* Gary Cross, Rick Szostak, 2018-12-21 Providing a global perspective on the development of American technology *Technology and American Society* offers a historical narrative detailing major technological transformations over the last three centuries With coverage devoted to both dramatic breakthroughs and incremental innovations authors Gary Cross and Rick Szostak analyze the cause and effect relationship of technological change and its role in the constant drive for improvement and modernization This fully updated 3rd edition extends coverage of industry home office agriculture transport constructions and services into the twenty first century concluding with a new chapter on recent electronic and technological advances *Technology and American Society* remains the ideal introduction to the myriad interactions of technological advancement with social economic cultural and military change throughout the course of American history Dementia Lab 2019. the increasing progress of secularization social mobility and democratization Time and Space in the Internet Age is a thought provoking study for academics and general readers interested in the history of technology and science **War in Space** Bowen Bleddyn E. Bowen,2020-06-18 Applying strategic theory to outer space and drawing out the implications for international relationsOffers a definitive and original vision of space warfare that theorises often overlooked aspects of contemporary space activities based in the discipline of Strategic Studies This original research draws out the implications of spacepower for wider debate in grand strategy and IR Applies the theory in a topical and contentious area within contemporary grand strategy anti access and area denial warfare in the Taiwan Strait between China and America Key principles are summarised in seven propositions to make the key take aways of theory applicable and memorable for researchers and practitioners This book presents a theory of spacepower and considers the implications of space technology on strategy and international relations The spectre of space warfare stalks the major powers as outer space increasingly defines geopolitical and military competition As satellites have become essential for modern warfare strategists are asking whether the next major war will begin or be decided in outer space Only strategic theory can explore the decisiveness and effects of war in space upon grand strategy and international relations The author applies the wisdom of military strategy to outer space and presents a compelling new vision of Earth orbit as a coastline rather than an open ocean or an extension of airspace as many have assumed Rooted in the classical military works of Clausewitz Mahan and Castex to name a few this book presents comprehensive principles for strategic thought about space that explain the pervasive and inescapable influence of spacepower on strategy and the changing military balance of the 21st century **Inventors of Transportation Technology** Heather S. Morrison,2015-07-15 Today to many people driving a car is as essential as eating Transportation has come a long way since its origins but through the decades there have been significant advances in transportation technology From the bicycle to the hybrid car this book traces the most important transportation inventors and the inventions that made society what it is today **The World of Maps** Judith A. Tyner,2014-01-01 Maps have power they can instruct make life easier mislead or even lie This engaging text provides the tools to read analyze and use any kind of map and assess its strengths and weaknesses Requiring no advanced math skills the book presents basic concepts of symbolization scale coordinate systems and projections It gives students a deeper understanding of the types of maps they encounter every day from turn by turn driving directions to the TV weather report Readers also learn how to use multiple maps and imagery to analyze an area or region The book includes 168 figures among them 22 color plates most of the figures can be downloaded as PowerPoint slides from the companion website Appendices contain a glossary recommended resources a table of commonly used projections and more **Time and Navigation** Andrew K. Johnston,Roger D. Connor,Carlene E. Stephens,Paul E. Ceruzzi,2015-06-02 If you want to know where you are you need a good clock The surprising connection between time and place is explored in Time and Navigation The Untold Story of Getting from Here to There the companion

book to the National Air and Space Museum exhibition of the same name Today we use smartphones and GPS but navigating has not always been so easy The oldest clock is Earth itself and the oldest means of keeping time came from observing changes in the sky Early mariners like the Vikings accomplished amazing feats of navigation without using clocks at all Pioneering seafarers in the Age of Exploration used dead reckoning and celestial navigation later innovations such as sextants and marine chronometers honed these techniques by measuring latitude and longitude When explorers turned their sights to the skies they built on what had been learned at sea For example Charles Lindbergh used a bubble sextant on his record breaking flights World War II led to the development of new flight technologies notably radio navigation since celestial navigation was not suited for all weather military operations These forms of navigation were extended and enhanced when explorers began guiding spacecraft into space and across the solar system Astronauts combined celestial navigation technology with radio transmissions The development of the atomic clock revolutionized space flight because it could measure billionths of a second thereby allowing mission teams to navigate more accurately Scientists and engineers applied these technologies to navigation on earth to develop space based time and navigation services such as GPS that is used every day by people from all walks of life While the history of navigation is one of constant change and innovation it is also one of remarkable continuity Time and Navigation tells the story of navigation to help us understand where we have been and how we got there so that we can understand where we are going

Technology in America Alan I. Marcus, Howard P.

Segal, 2018-04-05 Now in a thoroughly updated new edition this successful textbook surveys the history of technology in America from the 1600s to the 21st century Alan I Marcus and Howard P Segal explore the effect society culture politics and economics have had upon technological advances and place the evolution of American technology within the broader context of the development of systems such as transportation and communications This unique book connects phenomena such as colonial printing presses with the American Revolution early photographs with the creation of an allegedly unique American character and high tech advances in biotechnology with a growing desire for individual autonomy This is an ideal resource for undergraduate and postgraduate students of the history of technology the history of science and American history

Space Policy for the Twenty-First Century Wendy N. Whitman Cobb, Derrick V. Frazier, 2024-04-30 National Security Space Institute 2025 Space Professional Reading List A foundational accessible overview of space policy in the United States This book provides readers with the first comprehensive overview of major space policies in the United States and a framework through which to analyze them It examines all facets of space policy civilian military and commercial and presents this material accessibly for use by readers at multiple levels from undergraduate courses to government practitioners making and implementing policy The first section offers a history of space exploration focusing on the US within a global context The second section looks at the actors and institutions involved in setting space policy in a government based on the separation of powers including the president Congress NASA and the Department of Defense The book concludes with chapters on the

different sectors of space policy as well as questions this field will face in the future As policymakers and business leaders become increasingly aware of the everyday systems that depend on space technologies such as communications mapping and weather monitoring and as space becomes a more visible arena for commercial competition potential humanitarian gain and military threats Space Policy for the Twenty First Century helps students and professionals navigate the complexity of space as a policy area

Original Sin Bleddyn E. Bowen, 2023-01-01 Space technology was developed to enhance the killing power of the state The Moon landings and the launch of the Space Shuttle were mere sideshows drawing public attention away from the real goal military and economic control of space as a source of power on Earth Today as Bleddyn E Bowen vividly recounts thousands of satellites work silently in the background to provide essential military intelligence and economic capabilities No major power can do without them Beyond Washington Moscow and Beijing truly global technologies have evolved from the ground floor of the nuclear missile revolution to today's orbital battlefield shaping the wars to come World powers including India Japan and Europe are fully realizing the strategic benefits of commanding Earth's cosmic coastline as a stage for war development and prestige Yet as new contenders spend more and more on outer space there is scope for cautious optimism about the future of the Space Age if we can recognize rather than hide its original sin
