Approaches to Understanding the Cumulative Effects of Stressors on Marine Mammals National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Ocean Studies Board, Committee on the Assessment of the Cumulative Effects of Anthropogenic Stressors on Marine Mammals, 2017-06-04 Marine mammals face a large array of stressors including loss of habitat chemical and noise pollution and bycatch in fishing which alone kills hundreds of thousands of marine mammals per year globally To discern the factors contributing to population trends scientists must consider the full complement of threats faced by marine mammals Once populations or ecosystems are found to be at risk of adverse impacts it is critical to decide which combination of stressors to reduce to bring the population or ecosystem into a more favorable state Assessing all stressors facing a marine mammal population also provides the environmental context for evaluating whether an additional activity could threaten it *Approaches to Understanding the Cumulative Effects of Stressors on Marine Mammals* builds upon previous reports to assess current methodologies used for evaluating cumulative effects and identify new approaches that could improve these assessments This review focuses on ways to quantify exposure related changes in the behavior health or body condition of individual marine mammals and makes recommendations for future research initiatives

Martian Gullies and their Earth Analogues S.J. Conway, J.L. Carrivick, P.A. Carling, T. de Haas, T.N. Harrison, 2019-01-21 Gullies on Mars resemble terrestrial gullies involved in the transport of abundant material down steep slopes by liquid water However liquid water should not be stable at the Martian surface The articles in this volume present the two main opposing theories for Martian gully formation climate driven melting of surficial water ice deposits and seasonal dry ice sublimation The evidence presented ranges from remote sensing observations to experimental simulations to comparison with Earth analogues The opposing hypotheses imply either that Mars has been unusually wet in the last few million years or that it has remained a cold dry desert both with profound implications for understanding the water budget of Mars and its habitability The debate questions the limits of remote sensing data and how we interpret active processes on extra terrestrial planetary surfaces even beyond those on Mars as summarized by the review paper at the beginning of the book

Weather Disasters in the South China Sea and Surrounding Regions: Observations, Theories, Data Assimilation, and Numerical Forecasting Jianjun Xu, Julian Wang, Sheng Chen, Chunlei Liu, 2023-08-28 The South China Sea SCS is the linkage between the western Pacific Ocean and the Indian Ocean Its weather climate variations are regarded as an important factor influencing social and economic development The SCS and its surrounding regions suffer from various weather disasters e.g. typhoons extreme rainfall sea fog severe convection tornado and wind hazards which are serious threats to life and property As such accurate nowcasting is life critical in this area However it is still a worldwide challenge to improve the forecast accuracy due to less understanding of the formation mechanism evolution pattern internal structure and physical processes As a dominant physical process the ocean atmosphere interaction plays an important role in affecting the weather climate system and disasters over the SCS and surrounding regions particularly vertical mixing between the interface of ocean and

atmosphere This research topic aims to provide an in depth understanding of the physical processes related to these disasters applications of data assimilation and the development of forecasting techniques which are essential to enhance disaster prevention and mitigation capabilities In addition in depth research of these disasters and their impacts could help to uncover the hazard causing characteristics and establish a corresponding risk assessment system
