References **Financial Markets in Continuous Time** Rose-Anne Dana, Monique Jeanblanc, 2007-06-30 In modern financial practice asset prices are modelled by means of stochastic processes and continuous time stochastic calculus thus plays a central role in financial modelling This approach has its roots in the foundational work of the Nobel laureates Black Scholes and Merton Asset prices are further assumed to be rationalizable that is determined by equality of demand and supply on some market This approach has its roots in the foundational work on General Equilibrium of the Nobel laureates Arrow and Debreu and in the work of McKenzie This book has four parts The first brings together a number of results from discrete time models The second develops stochastic continuous time models for the valuation of financial assets the Black Scholes formula and its extensions for optimal portfolio and consumption choice and for obtaining the yield curve and pricing interest rate products The third part recalls some concepts and results of general equilibrium theory and applies this in financial markets The last part is more advanced and tackles market incompleteness and the valuation of exotic options in a complete market

The Statistical Mechanics of Financial Markets Johannes Voit, 2005-12-28 The present third edition of The Statistical Mechanics of Financial Markets is published only four years after the first edition The success of the book highlights the interest in a summary of the broad research activities on the application of statistical physics to financial markets I am very grateful to readers and reviewers for their positive reception and comments Why then prepare a new edition instead of only reprinting and correcting the second edition The new edition has been significantly expanded giving it a more practical twist towards banking The most important extensions are due to my practical experience as a risk manager in the German Savings Banks Association DSGV Two new chapters on risk management and on the closely related topic of economic and regulatory capital for financial institutions respectively have been added The chapter on risk management contains both the basics as well as advanced topics e.g. coherent risk measures which have not yet reached the statistical physics community interested in financial markets Similarly it is surprising how little research by academic physicists has appeared on topics relating to Basel II Basel II is the new capital adequacy framework which will set the standards in risk management in many countries for the years to come Basel II is responsible for many job openings in banks for which physicists are extremely well qualified For these reasons an outline of Basel II takes a major part of the chapter on capital
