Roman Period Statuettes in the Netherlands and beyond Christel Veen,2025-10-01 The subject of this study is a relatively rare category of artefacts bronze and terracotta statuettes that represent deities human figures and animals They were introduced in the northwestern provinces by Roman troops from the end of the 1st century BCE onwards The statuettes have been recovered from military and non military settlements the surrounding landscape and to a far lesser extent from sanctuaries and graves Until now their meaning and function have seldom been analysed in relation to their find spots Contrary to traditional studies they have been examined as one separate category of artefacts which offers new insights into the distribution pattern and iconographic representation of deities When studying a group of artefacts a large research area or a large dataset is required as well as dateable artefacts and find contexts These conditions do not apply to the Netherlands and to the majority of statuettes that are central to this study Moreover although the changing appearance of statuettes suggest a transformation of cults the identities of the owners of these statuettes remain invisible to us Therefore the issue of Romanization is not put central here Instead the focus is on a specific aspect of religion known as lived religion within the wider subject of its transformation in the Roman period how people used statuettes in everyday life in the context of their houses and settlements

Curtis,2016-05-13 Why in the pre industrial period were some settlements resilient and stable over the long term while other settlements were vulnerable to crisis Indeed what made certain human habitations more prone to decline or even total collapse than others All pre industrial societies had to face certain challenges exogenous environmental hazards such as earthquakes or plagues economic or political hazards from outside such as warfare or expropriation of property or hazards of their own making such as soil erosion or subsistence crises How then can we explain why some

societies were able to overcome or negate these problems while other societies proved susceptible to failure as settlements contracted stagnated were abandoned or even disappeared entirely This book has been stimulated by the questions and hypotheses put forward by a recent disaster studies literature in particular by placing the intrinsic arrangement of societies at the forefront of the explanatory framework Essentially it is suggested that the resilience or vulnerability of habitation has less to do with exogenous crises themselves but on endogenous societal responses which dictate a the extent of destruction caused by crises and the capacity for society to protect itself and b the capacity to create a sufficient recovery By empirically testing the explanatory framework on a number of societies between the Middle Ages and the nineteenth century in England the Low Countries and Italy it is ultimately argued in this book that rather than the protective functions of the state or the market or the implementation of technological innovation or capital investment the most resilient human habitations in the pre industrial period were those than displayed an equitable distribution of property and a well balanced distribution of power between social interest groups Equitable distributions of power and property were the underlying conditions in pre industrial societies that all
