Shepperd,2002 This paper presents a broad based synthesis of the general ecology of the ponderosa pine ecosystem in the Black Hills This synthesis contains information and results of research on ponderosa pine from numerous sources within the Black Hills ecosystem We discuss the silvical characteristics of ponderosa pine natural disturbances that govern ecosystem processes wildlife habitat and management various silvicultural methods to manage ponderosa pine forests and watershed management of the Black Hills **Research Paper FPL-RP** ,1986 **Confidence Intervals for Predicting Lumber Strength Properties Based on Ratios of Percentiles from Two Weibull Populations** Richard Arnold Johnson,2003 Ratios of strength properties of lumber are commonly used to calculate property values for standards Although originally proposed in terms of means ratios are being applied without regard to position in the distribution It is now known that lumber strength properties are generally not normally distributed Therefore nonparametric methods are often used to derive property values In some situations estimating properties based on a parametric estimate is required For these situations the three parameter Weibull distribution looks promising To use this approach procedures for estimating confidence intervals for ratios of percentiles from two Weibull populations are needed In this study we employed the large sample properties of maximum likelihood estimators to obtain a confidence interval for the ratio of 100Sa th percentiles from two different three parameter Weibull distributions The coverage probabilities were investigated by a computer simulation study We concluded that the procedure has considerable promise but many questions remain to be answered Tailings Management Handbook Kimberly Finke Morrison,2022-02-01 As long as we have mining and mineral processing tailings and the responsible management thereof will remain at the forefront with a company s environmental social and governance ESG performance in part a reflection of how well tailings risks are being managed The Global Industry Standard on Tailings Management GISTM was published in August 2020 aiming to prevent catastrophic failure of tailings facilities by providing operators with specified measures and approaches throughout the mine life cycle taking into account multiple stakeholder perspectives In 2021 the International Council on Mining Metals ICMM published the Tailings Management Good Practice Guide intended to support safe responsible management of tailings across the global mining industry providing guidance on good governance and engineering practices to support continual improvement in tailings storage facility TSF management and help foster and strengthen the safety culture of mining companies The Tailings Management Handbook is important and

timely because there is no other comprehensive resource rooted in these new fundamentals and global principles for tailings management Tailings management requires interdisciplinary and cross functional understanding and support which is apparent throughout this handbook Dive into the wealth of information contributed by more than 100 world renowned experts beautifully crafted into a full color handbook that focuses on the basics life cycle planning site and tailings characterization TSF design and construction as well as systems and operations of TSFs The inclusion of 42 case studies is an added plus with real world successes and lessons learned
