the basis for the formulation of tailored starter cultures In the fermenting food and beverage arena the wine sector is generally characterized by the generation of a high added value Together with a pronounced seasonality this feature strongly contributes to the selection of a large group of starter cultures In the last years several studies contributed to describe the complexity of grapevine associated microbiota using both culture dependent and culture independent approaches The grape associated microbial communities continuously change during the wine making process with different dominances that correspond to the main biotechnological steps that take place in wine In order to simplify following a time trend four major dominances can be mainly considered non Saccharomyces Saccharomyces lactic acid bacteria LAB and spoilage microbes The first two dominances come in succession during the alcoholic fermentation the impact of Saccharomyces that are responsible of key enological step of ethanol production can be complemented integrated by the contributions of compatible non Saccharomyces strains Lactic acid bacteria constitute the malolactic consortium responsible of malolactic fermentation a microbial bioconversion often desired in wine especially in red wine production Finally the fourth dominance the undesired microbiota represents a panel of microorganisms that coupling spoilage potential to the resistance to the harsh conditions typical of wine environment can cause important economic losses In each of these four dominances a complex microbial biodiversity has been described The studies on the enological significance of the micro biodiversity connected with each of the four dominances highlighted the presence of a dichotomy in each consortia there are species strains that in reason of their metabolisms are able to improve wine qualities resource of interest in starter cultures design and species strains that with their metabolism are responsible of depreciation of wine Articles describing new oenological impacts of yeasts and bacteria belonging to the four main categories above mentioned non Saccharomyces Saccharomycetes lactic acid bacteria and spoilage microbes are welcome Moreover in this Research Topic we encourage mini review submissions on topics of immediate interest in wine microbiology that link microbial biodiversity with positive negative effects in wine

"Visual Propaganda, Exhibitions, and the Spanish Civil War " MiriamM. Basilio,2017-07-05 Visual Propaganda Exhibitions and the Spanish Civil War is a history of art during wartime that analyzes images in various media that circulated widely and were encountered daily by Spaniards on city walls in print and in exhibitions Tangible elements of the nation s past monuments cultural property and art historical icons were displayed in temporary exhibitions and museums as well as reproduced on posters and in print media to rally the population define national identity and reinvent distant and recent history Artists political party propagandists and government administrators believed that images on the street in print and in exhibitions would create a community of viewers brought together during the staging of public exhibitions to understand their own roles as Spaniards This book draws on extensive archival research brings to light unpublished documents and examines visual propaganda exhibitions and texts unavailable in English It engages with questions of national self definition and historical memory at their intersections with the fine arts visual culture exhibition history tourism and propaganda during the Spanish

Civil War and immediate post war period as well as contemporary responses to the contested legacy of the Spanish Civil War  
It will be of interest to scholars in art history visual and cultural history history and museum studies      **Top 10 Barcelona**
